## 1. Overview

**eBay Product Importer For Magento** is an extension developed by CedCommerce for Magento Store, which allows the admin to import products from the eBay store to the Magento store based on the eBay Seller Id and eBay Site Id.

**eBay Product Importer For Magento** is a one-step process, which means it imports the products on a single click. This extension supports only Simple and Configurable Products.

### Key Features are as follows:

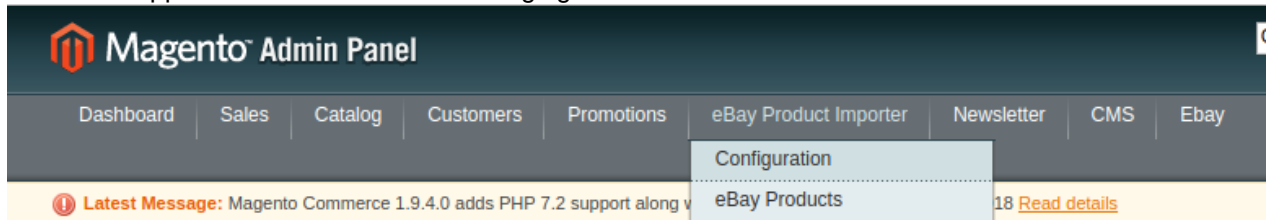

- Hassle-free dynamic attribute creation.
- User-Friendly and easy to understand.
- Imports Simple and Configurable Products from the eBay store to the Magento store through eBay API.
- It is a one-step process product import.
- Uploads all the products variation and stock information on the fly.

## 2. eBay Product Importer Configuration Settings

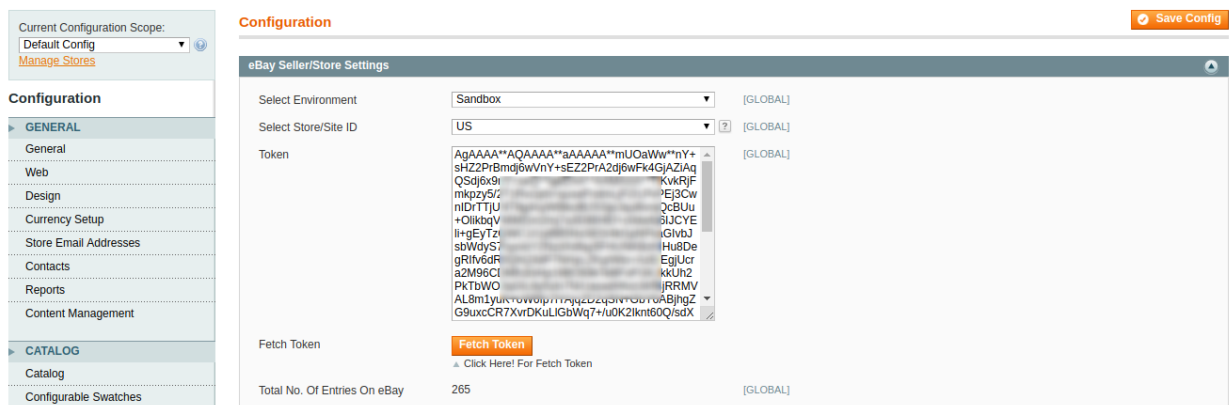

Once the extension is successfully installed in the Magento store, the **EBAY PRODUCT IMPORTER** menu appears on the top navigation bar displayed in the Magento Store Admin Panel. Before starting with the configuration settings, the pre-requisite is to have an eBay seller account.

### To set up the eBay Product Importer Configuration settings

1. Go to **Magento Store Admin** panel.
2. On the top navigation bar, click the **EBAY PRODUCT IMPORTER** menu. The menu appears as shown in the following figure:

3. Click on **Configuration**. The **Configuration** page appears as shown in the following figure:

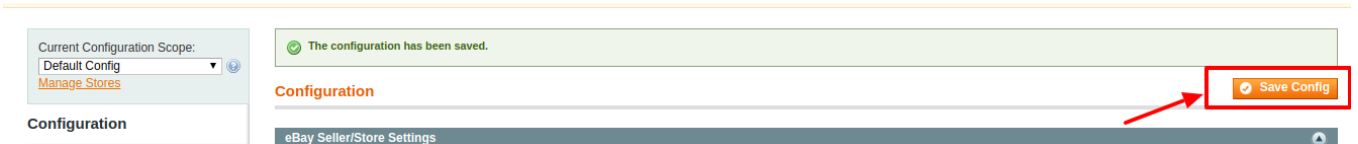

4. In the **Select Environment** list, select **Sandbox** or **Production** as per the requirement.  
**Note:** *Sandbox environment is used for the testing purpose; Production is to make it live.*
5. In the **Select Store Location** list, select the required location.  
**Note:** Depending on the selected Store Location, all the relevant information is fetched by using the Fetch Token and the Fetch Other Details buttons.

**Now before you start the configuration, you need to take an important step. You need to disable the secret key to be added to the URL while entering it during the configuration process.**

6. Click the **Fetch Token** button.  
The page is redirected to the **eBay Sign In** page as shown in the following figure:

7. Enter the eBay login credentials, and then click the **Sign in** button.  
The page appears as shown in the following figure:

8. Click the **Agree** button.
9. The following required information is fetched from the eBay website to the Magento store:
  - eBay Access Token
  - eBay Token Expiration Time
  - eBay Token Created Time
  - eBay Token Session ID
10. Click the **Save Config** button.  
The configuration settings are saved.

### 3. eBay Products

*The Magento store owner can perform the following tasks:*

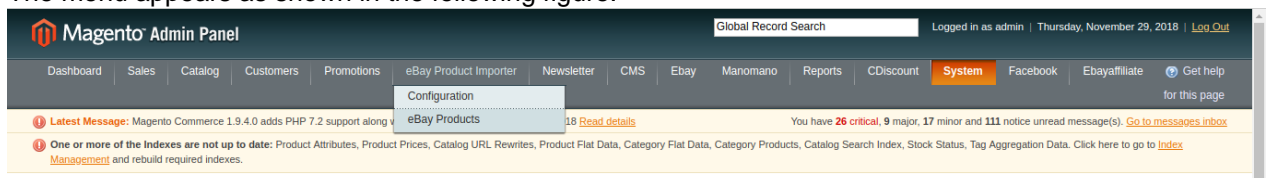

- **Import Products in Bulk:** Imports all products from eBay
- **Create Products in Bulk:** Creates products in bulk with basic details such as Name, Quantity, SKUs, and so on.
- **Get Product Details in Bulk:** Imports category, images, and description of products in bulk
- **Get Variation Images of Products in Bulk:** Imports variation product's images in bulk
