1. Overview

Headquartered in San Jose, California, eBay is a multinational e-commerce giant that facilitates C2C and B2C sales. It is a multibillion-dollar organization that **operates in about 30 countries** (as of 2011). As per the reports of Statista, eBay had **171 million active users in the Q1 of 2018**, surpassing itself for the record of 170 million active users in the previous quarter.

eBay is one of the biggest marketplaces today and any seller aspiring to make a mark in the world of e-commerce wants to feature its product on such marketplaces. However, it is quite often that the sellers sometimes find it a long, complexed task to sell on such formidable marketplaces.

eBay Prestashop Integration is an advanced solution that connects your PrestaShop store to eBay marketplace and enables you to upload the products from PrestaShop to eBay, effortlessly. This integration facilitates the easy synchronization of your product orders, price and inventory between your PrestaShop store and eBay marketplace.

Features of the eBay Prestashop Integration:

Product Category Mapping: The admin using this extension can map numerous PrestaShop store categories to a single eBay marketplace category.

Enabling, Disabling, and Deletion of Products: This extension facilitates the merchants to easily disable, enable or permanently delete their products on eBay.com.

Profile-Based Pricing: This feature enables the admin to plan a variety of pricing strategies when selling a product or service on eBay marketplace. The profile-based pricing increases or decreases the product price on eBay marketplace.

Simple and Configurable Product Upload: The admin using this extension can upload simple as well as configurable types of products on eBay marketplace.

Cron Management: Cron setting updates the product inventory, order, and price automatically, after a fixed interval of time.

Bulk Upload System: The vendor may upload a huge number of products on eBay marketplace using the bulk product upload feature.

Rejected Product Notification: If a product gets rejected by eBay due to the violation of eBay guidelines or

invalid data, the merchants can see the details of the error according to the individual products in the module.

Profile Based Product Upload: The admin can easily upload the products on eBay marketplace after creating a profile and assigning the products to it.

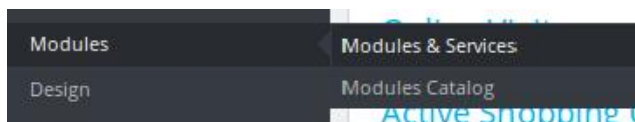

New Order Notification: The admin receives a notification on the registered email address whenever a new order is fetched from eBay marketplace.

2. eBay Prestashop Module Installation

To install the module

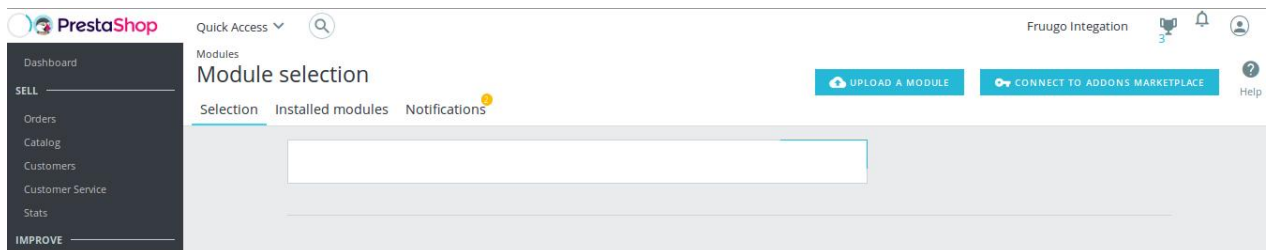

- Go to the **Prestashop Admin** panel.
- In the left navigation panel, place cursor on **Modules** menu.

The menu appears as shown in the following figure:

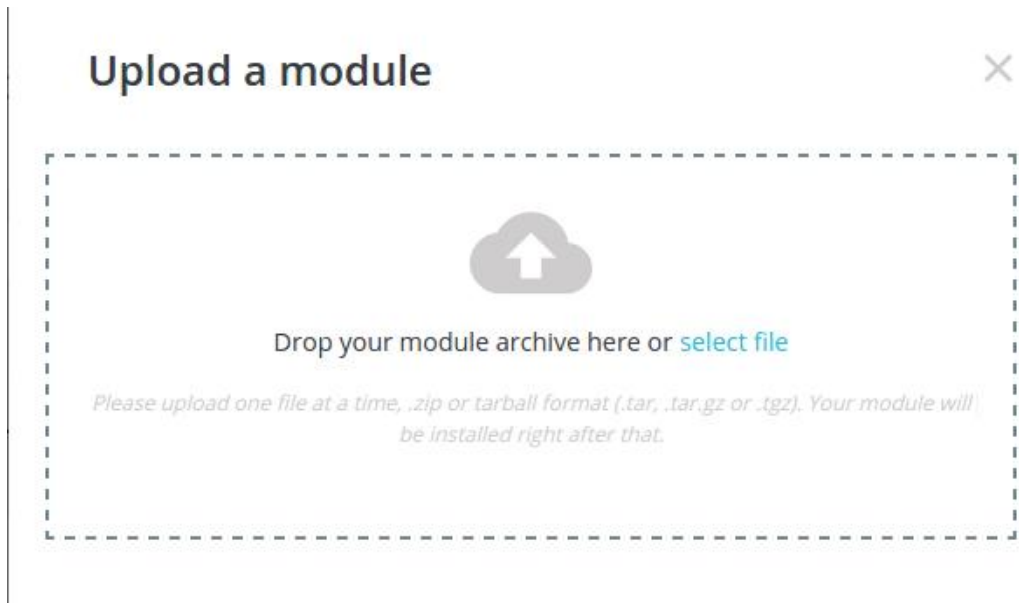

- Click **Modules & Services**.

The page appears as shown in the following figure:

- In the right panel, click the **UPLOAD A MODULE** button.

A dialog box appears as shown in the following figure:

- **Drag and Drop** the module or click the **select file** link to upload the eBay PrestaShop Integration module.

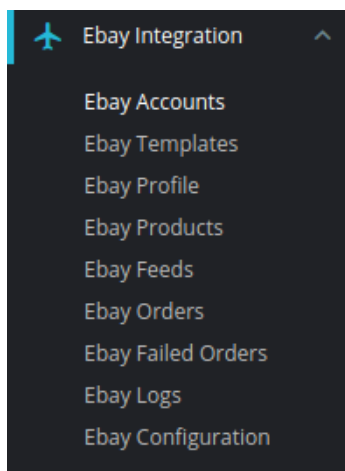

The modules is installed and the **Configure** button appears to set the configuration settings. The admin has two options to configure the settings. Either click the **Configure** button that appears while module installation or go to the **Installed Modules** tab and then configure the Integration settings.

3. eBay Configuration Settings

After installing the **eBay PrestaShop Integration** module, the store owner (admin) has to set up the eBay Integrations configurations. Prior to this, the admin has to first create a seller account on eBay seller panel. Once the seller account is created and is approved by eBay, the store owner can use the **eBay Username** and **Password** while setting up the eBay Configuration settings in the PrestaShop Admin panel.

To set up the configuration settings in the Prestashop Admin panel

1. Go to the **Prestashop Admin** panel.
2. In the left navigation panel, place cursor on the **eBay Integration** menu.
The menu appears as shown in the following figure:

3. Click on eBay Configuration.

The Configuration page appears as shown in the following figure:

4. In the **General Settings**, do the following steps:

a. In the **Enable** option, choose **Yes** to enable the module.

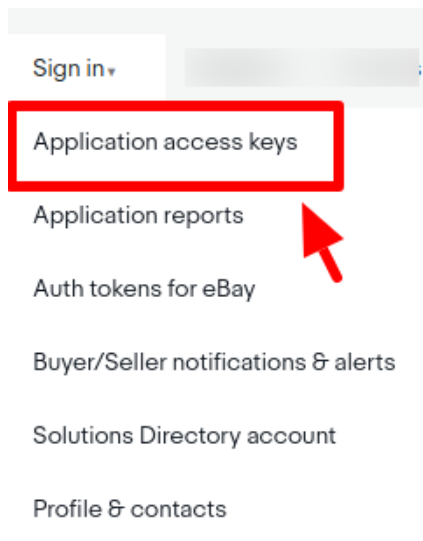

Now here you will see App ID, Dev ID, Cert ID, RUNAME option, you will get these details from your eBay Developer account.

To retrieve the above details from the eBay Developer AccountGo to <https://developer.ebay.com>(<https://developer.ebay.com>)

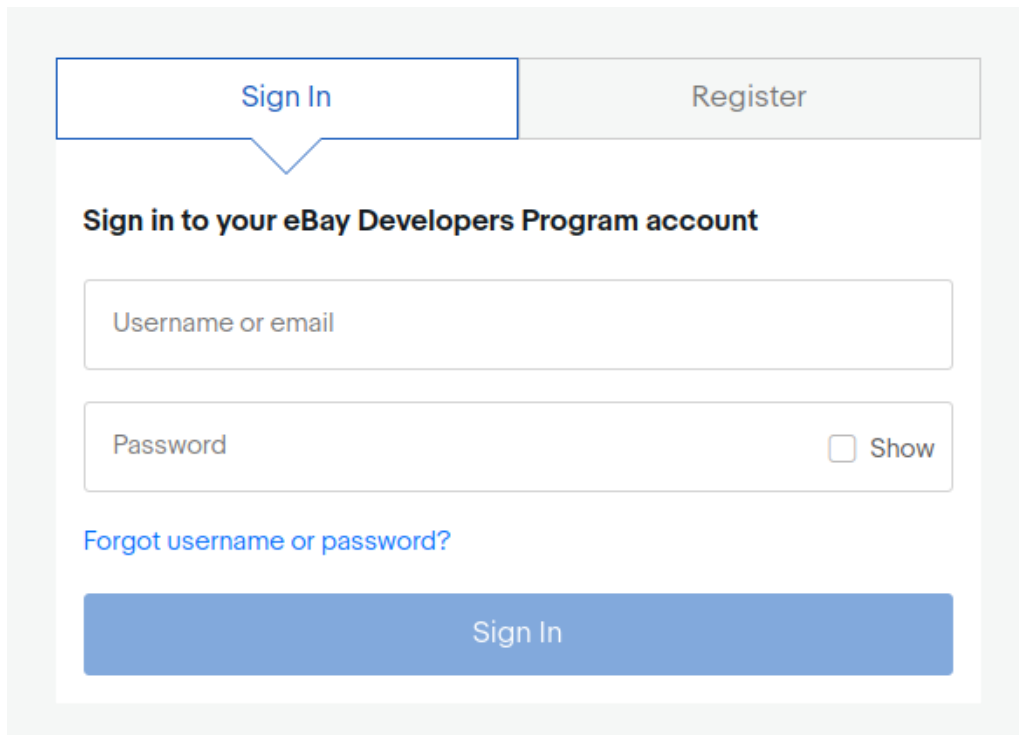

The page appears as shown in the following figure:

b. Click on **Sign in** Button. The tab expands as shown in the figure :

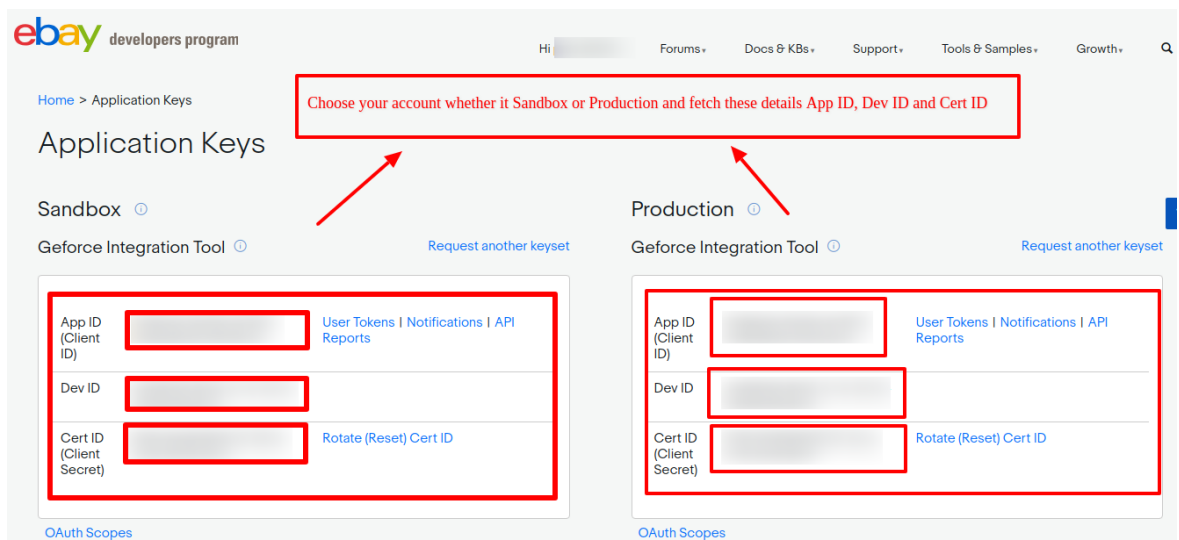

c. Click on **Application Access Keys** option, a tap appears here you can enter your **eBay Developer Account** login.

The image shows the eBay Developers Program sign-in and registration interface. At the top, there are two buttons: 'Sign In' (highlighted with a blue border) and 'Register'. Below these buttons is the heading 'Sign in to your eBay Developers Program account'. There are two input fields: 'Username or email' and 'Password'. The 'Password' field has a 'Show' toggle button. Below the password field is a link 'Forgot username or password?'. At the bottom is a large blue 'Sign In' button.

d. Once done, the page appears as shown in the following figure:

The image shows the 'Application Keys' page in the eBay Developers Program. The page has a header with the eBay logo and navigation links. The main content area is divided into two sections: 'Sandbox' and 'Production'. Each section has a 'Geforce Integration Tool' button and a 'Request another keyset' link. A red box highlights the instruction: 'Choose your account whether it Sandbox or Production and fetch these details App ID, Dev ID and Cert ID'. Below this, there are three input fields for each section: 'App ID (Client ID)', 'Dev ID', and 'Cert ID (Client Secret)'. Each input field is highlighted with a red box. There are also links for 'User Tokens | Notifications | API Reports' and 'Rotate (Reset) Cert ID'.

e. In the **App ID (Client ID)**, enter your ebay developer app ID

f. In the **Dev ID** section, enter your Dev ID details.

g. In the **Cert ID(Client Secret)**, enter your Cert ID details.

h. For **RUNAME** details, you need to follow these steps:

i. Click on User Tokens option.

The tab appears as shown in the following figure:

Home > User Tokens (eBay Sign-In)
