1. Overview

The **Flubit Integration For Magento 2** by CedCommerce is a handy tool that helps the Magento® 2 store owners to boost their business and generate the revenue as it interacts with Flubit API's to connect the Magento® 2 store to Flubit. It provides an opportunity to cover a wide range of customers.

Admin gets the authority to create Flubit Categories and the dependent attributes on the Magento 2 store. It also enables you to establish a mapping of the desired product category on the Magento 2 store for automatic submission of the selected product to the same category on Flubit.com.

This extension interacts with the Flubit Marketplace to integrate the synchronized product listing between Magento® 2 Store and the Flubit.com retailers.

It enables the admin to manage the Flubit orders on the seller's Magento® 2 stores without making any significant changes to operational functionalities.

Synchronizing orders, products, pricing, and inventory is possible through establishing the communication between Flubit APIs and the Magento® 2 stores.

Key Features are as follows:

- **Product Upload Based on Profile:** Enables the admin to create a profile based on a single category, and then assign the products to the profile to automate the product upload.
- **Bulk upload Methodology:** Admin gets the authority to upload bulk products on Flubit but just selecting the products and upload in one go.
- **Magento Order creation:** The newly placed orders on Flubit.com are automatically created in the Magento® 2 stores with all the required details as it is on Flubit.com.
- **Product Data Validation:** The extension enables validating the product information in accordance with Flubit standard and values.
- **Auto synchronization:** Auto synchronization of the product listing, order, inventory, and pricing at regular intervals is established between Magento® 2 Store and Flubit.com.
- **Product category mapping:** Follows category mapping philosophy. Admin can map any category of the Magento® 2 stores to the single category of Flubit.
- **Email Notification:** Admin receives the notification through the mail on new order creation, low stock and if the product is rejected from Flubit.
- **Auto-shipment procedure:*** Provides admin an ability to automate the process of shipment with Shipstation, Shipwork, Stamps.com, Linnworks, Xtento, ShipRush.

2. Flubit Integration Extension - Installation

To install the extension

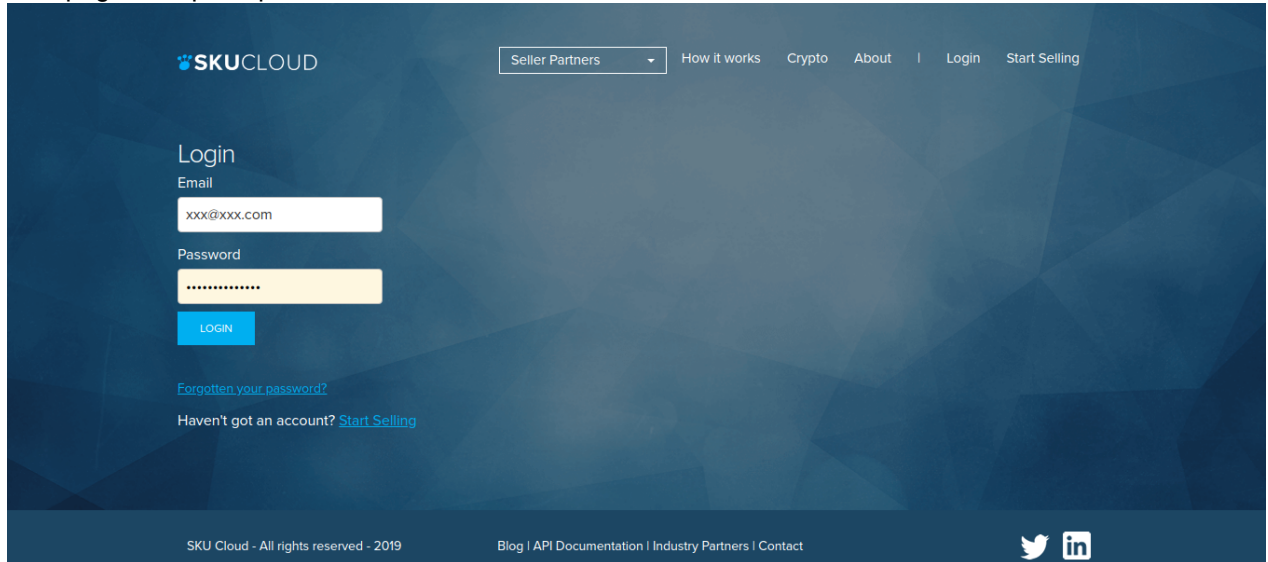

1. Log in the **ftp**, and then go to the **Magento 2** store root folder (generally present under the **public_html** folder).
2. Create a new folder named **code** under the **app** folder; under **code** folder, create a folder named **Ced**.
 - a. Upload or Drag and Drop **app/code/Ced/Flubit** directory.
 - b. After successfully uploading the directory, the extension will be installed/upgraded.
 - c. Now run the following upgrade command in **cmd**
php bin/magento setup:upgrade.

3. Retrive API credentials from Flubit

Once the extension is successfully installed in the Magento 2 store, the merchant has to enter the **API Key details** in the respective fields displayed on the **Flubit Configurations** page while setting up the configurations.

To get the API Key Details from the Flubit:

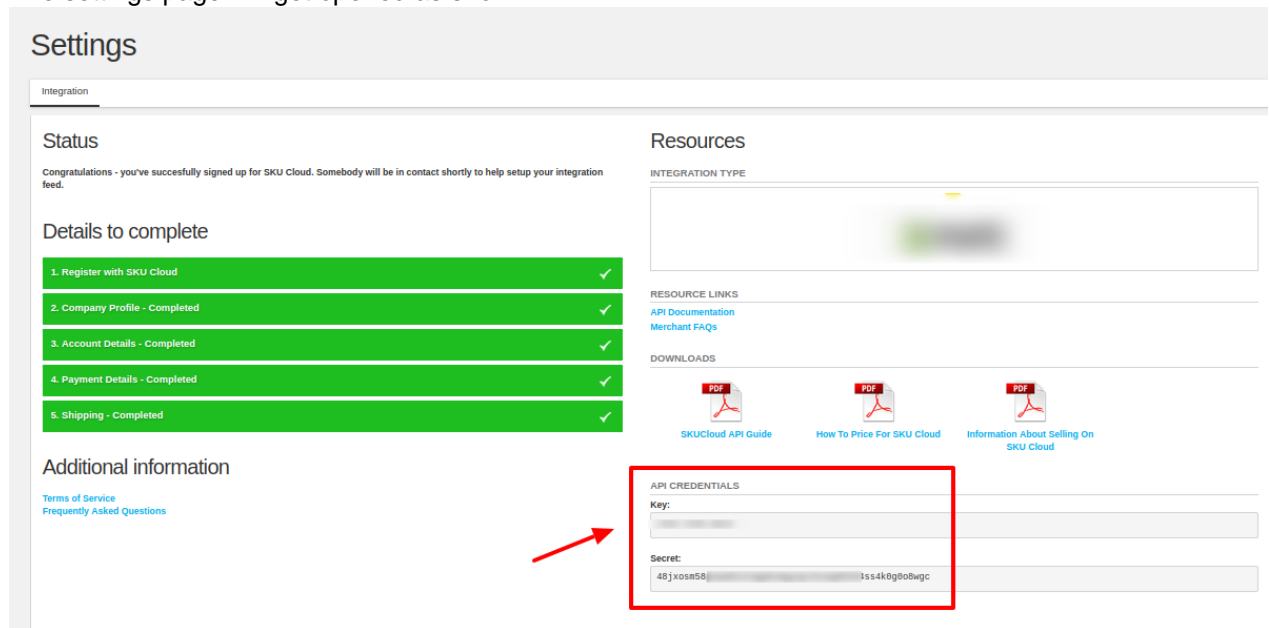

1. Go to Flubit Seller Panel.(<https://integration-admin.marketplace.cdon.com>)
This page will open up.

2. Log In to your seller account.
3. On the left panel click on settings as shown in the figure below:

4. The settings page will get opened as shown:

5. From here you can retrieve your API Key & Source Id. Now move back to cedcommerce configurations page for further process.

NOTE: Please make sure that your Flubit seller panel works in two modes:

1. Sandbox mode
2. Integration mode

In the sandbox mode, you can perform the whole setup, create profiles but none of your products will get live. This is just for testing purpose to ensure the working of the seller panel.

By switching your seller panel in the integration mode, you can start selling on Flubit marketplace as all your products will get live and you will receive real orders.

The mode is mentioned on the top of the seller panel page as shown in the figure:

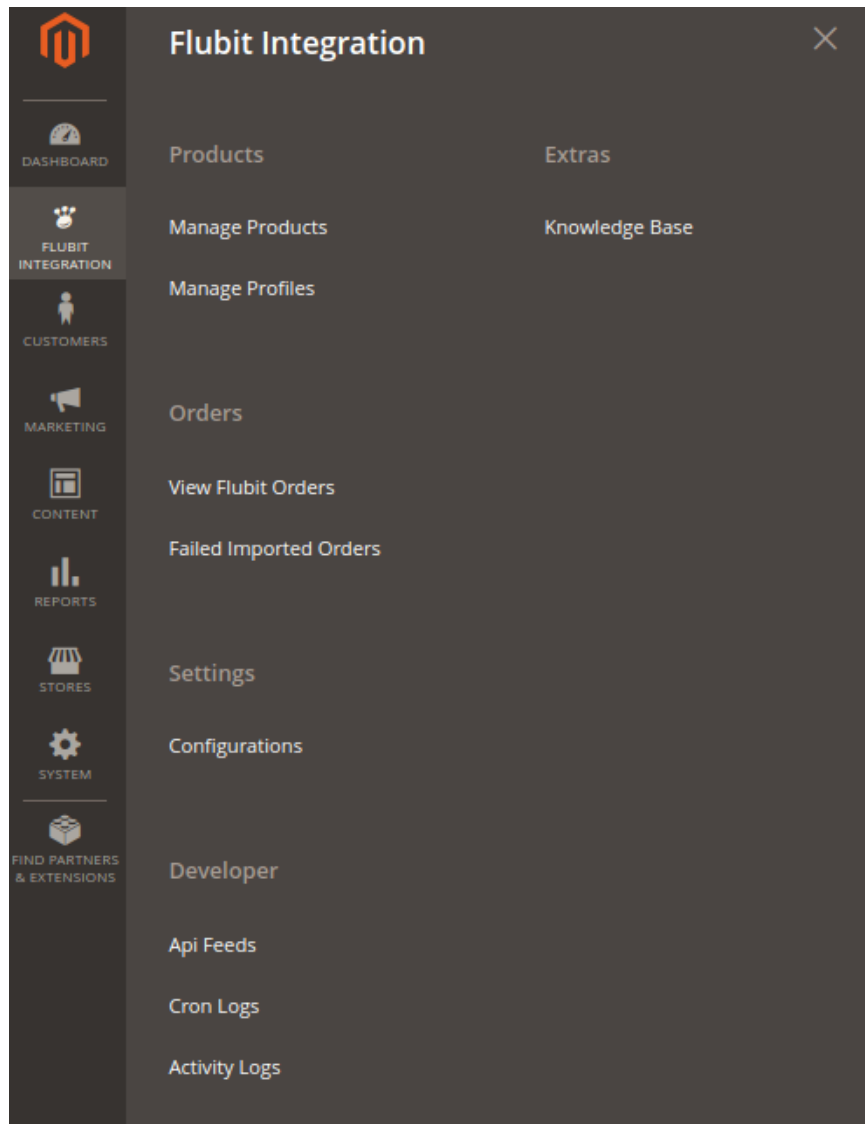

4. Configuration Settings

Once the extension is successfully installed on the Merchant's store, the Flubit tab appears in the Magento Admin Panel.

The admin has to set up the configuration settings for establishing the connection between the Magento store and the Flubit marketplace.

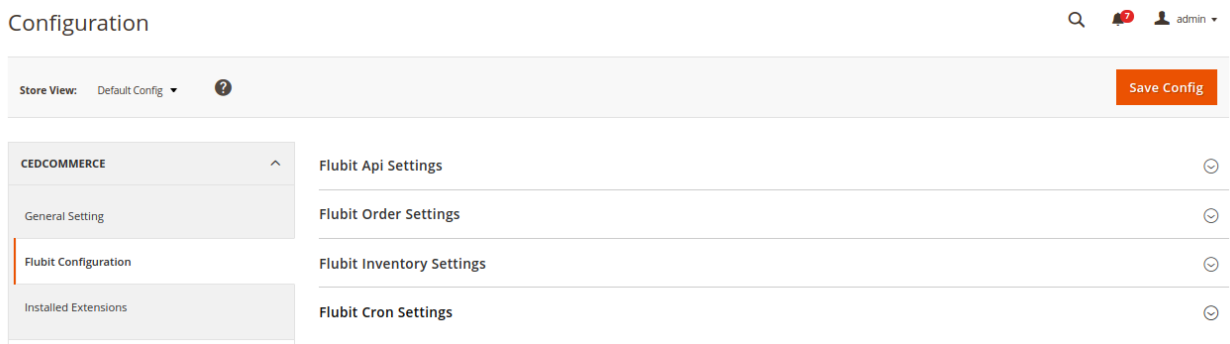

To set up the configuration settings in the Magento Admin panel:

1. Go to the **Admin** panel.
2. On the left navigation bar, you will find the **Flubit Integration** option.

1. Click **Configuration**.

The **Flubit Configuration** page appears as shown in the following figure:

2. Click on **Flubit API settings**, you will find the following window:

Flubit Api Settings

Enabled [global] Yes ▼

BaseUrl [global] dsfasdfasf

Key [global] asdfasfasd

Secret [global]

Orders Fetch Start Date [global] 2018-12-19
Select Date

Debug Log [global] Yes ▼

1. In the **Enabled** list, select **Yes**.

Note: The **No** option disables the Flubit Integration extension.

2. Enter the API of your seller panel in the **Base URL** section.

3. Enter the **Key** provided by Flubit in this section.

4. In the **Secret** Section, enter Your secret key.

5. In the **Orders Fetch Start Date** box, click the Calendar icon to select the required date.

6. In the **Flubit Debug Log** list, select **Yes** to enable Flubit Debug Mode for logging.

3. Click on **Flubit Order settings**, you will find the following window:

Flubit Order Settings

Please set the order settings for Flubit.com

Increment Id Prefix [global] FBIT-
Prefix for Flubit Increment ID

Order Email [global]

Force Product Create on Order [global] Enable ▼

Mock Order [global] Disable ▼

1. In the **Increment Id Prefix** enter the Flubit Increment ID.

2. In the **Order Email** box, enter the email id associated with your Flubit account.

3. In the **Force Product Create on Order** section, you can enable/disable with the drop-down menu. In case any product profile is not created in Flubit and you are selling so, it by default creates it.

4. In the **Mock Order** box also you can enable/disable the option. This is for you to ensure the working as it creates dummy orders.

5. Click on **Flubit Cron Settings**. You will find the window as shown below.

Flubit Cron Settings

The screenshot shows the 'Flubit Cron Settings' window. It contains three rows of settings, each with a label, a status dropdown, and a description:

- Flubit Order Cron** [global]: The dropdown is set to 'Enable'. Below it is the text 'Order Fetch Cron'.
- Flubit Price/ Full Item Cron** [global]: The dropdown is set to 'Enable'. Below it is the text 'Price Sync Cron'.
- Flubit Inventory Cron** [global]: The dropdown is set to 'Enable'. Below it is the text 'Inventory Sync Cron'.

1. **Flubit Order Cron:** Enable/Disable the **Order Fetch Cron**.
2. **Flubit Price/Full Item Cron:** Enable/Disable the **Price Sync Cron**.
3. **Flubit Inventory Cron:** Enable/Disable the **Inventory Sync Cron**.

In these three you can control the working of the Crons that automatically fetches the data in a specified period of time.

5. Manage Flubit Profiles

Admin can create a new profile and assign the required products to the profile. While creating and editing the profile, admin can map the Magento Store attributes to the Flubit attributes. These attributes are applicable to all the products that are assigned to the profile.

Admin can do the following tasks:

- Add a new profile
- Edit the existing profile
- Delete the profile
- Submit Actions on the Flubit Profile Listing Page
- Product Manager

5.1. Add a New Profile

To add a new profile

1. Go to the **Magento Admin** panel.
2. On the left navigation bar, click the **Flubit Integration** menu.
The menu appears as shown in the following figure:

3. Click the **Manage Profiles** menu.

The **Flubit Profile Listing** page appears as shown in the following figure:

Profile Products

Profile Information

Profile Code *
For internal use. Must be unique with no spaces

Profile Name *

Profile Status * Disabled
Specific store view information of products will send to flubit

5. In the **Profile Code** box, enter a profile code.

Note: It is only for the internal use. Use the unique profile code with no spaces. Start with small letters.

6. In the **Profile Name** box, enter the name of the profile.

Note: Use the unique name to identify the profile.

7. In the **Status** list, select **Enabled** to enable the profile.

Note: The **Disabled** option disables the profile.

8. Click the **Save and Continue Edit** button.

9. In the left navigation panel, click the **Mapping** menu.

The page appears as shown in the following figure:

Flubit Attribute	Magento Catalog Attribute	Default Value
sku	sku	
name	name	
price	price	
description	description	

10. In the right panel, under **Category Mapping**, do the following steps:

- In the **Root Level Category**, select the preferred Flubit category that the admin wants to map.
- In the right panel, under **Flubit / Magento Attribute Mapping (Required/Optional mapping)**, do the following steps:
 - a. In the **Magento Catalog Attribute** column, select the required Magento Store attribute to map it with the corresponding Flubit attribute.
 - b. Repeat the mapping of all the required or optional Magento Store attributes listed with the corresponding Flubit attributes.
 - c. Click the **Add Attribute** button to add more attributes.

11. Click **Save and Continue Edit**.

12. In the left navigation panel, click the **Profile Products** menu. The page appears as shown in the following figure:

	Product Id	Product Name	Type	Vendor Status	Attrib. Set Name	SKU	Price
Yes	From To						From To USD

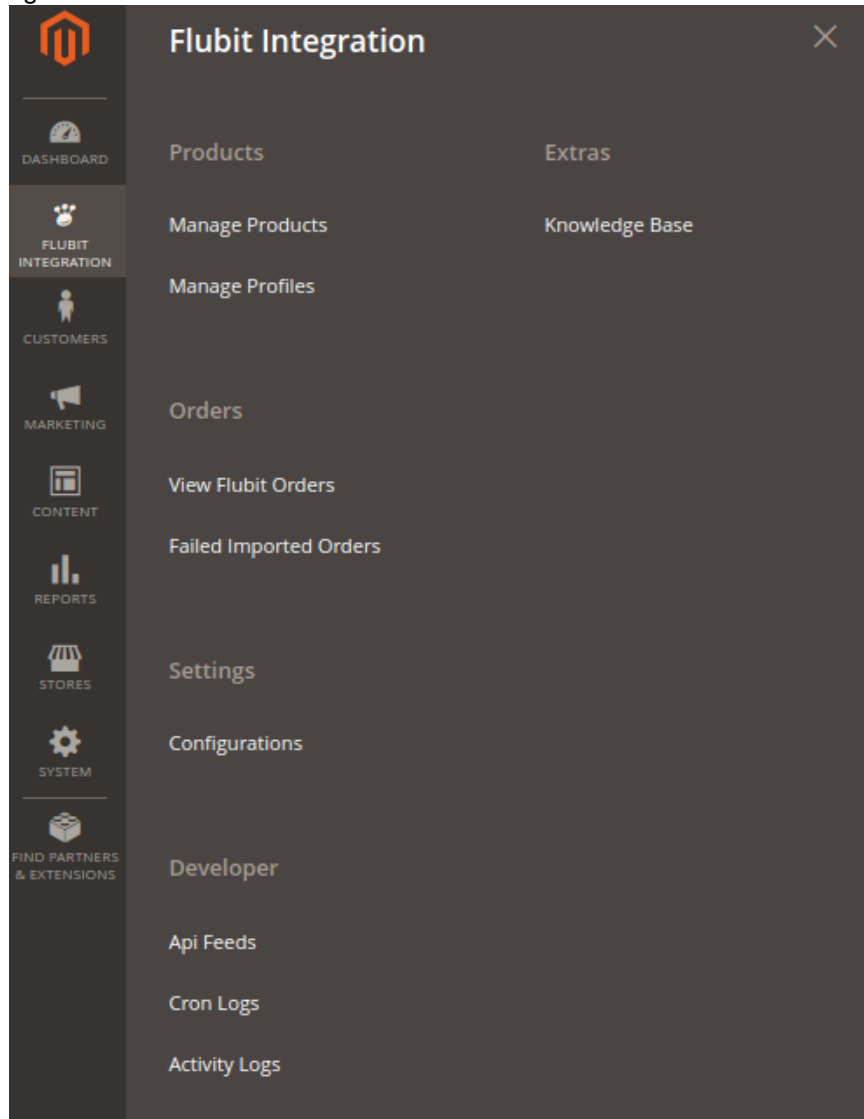

We couldn't find any records.

Since no products are assigned to the profile, there are no products listed in the table.

5.2. Edit the Existing Profile

To edit the existing profile

1. Go to the **Magento Admin** panel.
2. On the top navigation bar, click the **Flubit Integration** menu. The menu appears as shown in the following figure:

3. Click the **Manage Profiles** menu.

The **Flubit Profile Listing** page appears as shown in the following figure:

6. Manage Flubit Products

Admin can view, edit, and upload the individual product. Also, the admin can view the error message if any error exists in any product details. The admin can also submit certain actions on the selected products available on the **Product Manager** page.

Thus, on the Product Manager page, the user can perform the following three tasks:

- **Upload Single Product:** The user can upload the products that are listed on the **Product Manager** page, to the Flubit website.
- **View the Error Log:** If the product is invalid, then an **Invalid** button appears, and the admin can view the error log using the **Invalid** button.
- **Edit Product Information:** Edit the information of the product that the user wants to upload on the Flubit website.
- **Bulk Actions:** The user can submit the respective bulk action on the selected product before uploading it to the Flubit website.

6.1. Upload A Single Product

To upload a single product

1. Go to the **Magento Admin** panel.
2. On the top navigation bar, click the **Flubit Integration** menu. Click on **Manage Profiles**. The following window will appear:

- Click the **Back** button to go back to the **Flubit Product Listing** page.

7. Flubit Orders

Admin can view the following details from the **Flubit Orders** menu:

- View **Flubit Orders**
- View **Flubit Failed Orders**

7.1. View Flubit Orders

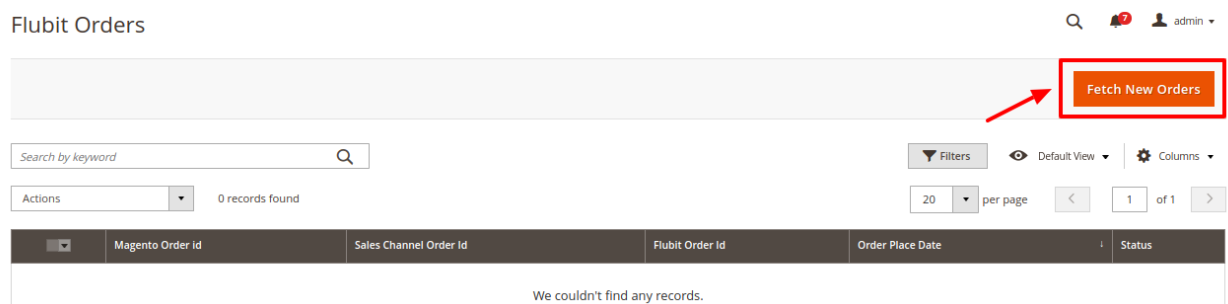

The user can fetch and view all the order details fetched from Flubit. Also, later on, can proceed further for shipment.

To view Flubit Orders

1. Go to **Magento Admin** panel.

2. Click the **Flubit Integration** menu, and then click **View Flubit Orders**. The menu appears as shown in the following figure:

3. Click the **Fetch New Orders** button. If the order is imported successfully, then a new record is found in the **Flubit Order Details** table as shown in the above figure.

Notes:

- Orders are automatically imported through CRON in every 10 minutes.
- Whenever the latest orders are imported from **Flubit**, a Notification appears in the notification area of the

Admin panel for those orders and they are Auto-Acknowledged as soon as they are imported into the Magento admin panel.

- If no Order is imported, then check the Failed order log on the **Failed Flubit Orders Import Log**
- Order are auto-rejected on Flubit in the following conditions:
 - When Flubit Product SKU does not exist in Magento store.
 - When Product is Out of Stock in Magento store.
 - When a product is disabled in Magento store.

To view the selected order

1. Go to **Magento Admin** panel.
2. On the **Flubit Integration** menu, click on **View Flubit Orders**.
The **Flubit Orders Details** page appears as shown in the following figure:

4. Here all the information regarding the order is available.

5. You can edit and Fill in the required fields.

7.2. Failed Orders

The users can view the list of failed Flubit orders on the **Failed Imported Orders** page.

Note: To clear all the failed import order logs at once, click the **Delete Orders** button.

Orders are not imported from Flubit due to the following conditions:

- If any product in the Flubit Order is Out of Stock in Magento store.
- If any product in the Flubit Order is disabled in Magento store.
- If any Product does not exist in Magento store or is deleted from Magneto after uploading on Flubit.
- If the selected Payment Method in Flubit System Configuration Setting is not available in Magento store.

To view, Flubit failed orders

1. Go to **Magento Admin Panel**.
2. On the **Flubit Integration** menu, click on **View Flubit Orders**, and then click **Failed Imported Orders**. The **Failed Imported Orders** page appears as shown in the following figure. If there are any failed orders they would be displayed in this window.
