WooCommerce Mobile App Admin Guide

# WooCommerce Mobile App Admin Guide

by CedCommerce Products Documentation

1. Overview	3
2. Manage Banner	4
3. Manage Notifications	7
4. General Settings	11

## 1. Overview

MageNative WooCommerce Mobile App Builder provides a flexible and the easy way to build the native mobile app for your WooCommerce stores. With the help of the MageNative app, the admin can convert the WooCommerce websites/stores into a featured mobile app consisting of all the website functionalities.

MageNative is the Application Development Platform that enables to present the website in the Mobile Application Environment. The admin can customize the app to match the brand image and publish it to meet the requirements of the front-end users.

The app displays the product information in an interactive way and uses the fewer data to show the product related information.

#### This application is compatible with the following operating systems:

- Android
- iOS

Note: It is available with the free trial version for first Thirty days.

#### The key features of the MageNative WooCommerce Mobile App extension are as follows:

- Attractive and User-Friendly Layout: Provides an attractive and user-friendly layout that makes the users to instinctively experience, how to use the interface.
- **Multi-Lingual and RTL Support**: It supports multiple languages and the right to the left theme. In the right to the left theme, writing starts from the right of the page and continues to the left.
- Native App: An application program, developed for the use on a specific platform or device.
- Synchronization: The app is synchronized with the website.
- Supports all product type: It supports all type of the products available in the WooCommerce store.
- **Search**: Enhanced search feature available to search the required product in the app based Name, description, Category of the product.
- Barcode And QR Code Reader and Scanner: QR Code Reader is used for Product sharing and easy product search. Barcode Scanner is used for the Real world product search.
- **Push Notification**: Using **Push Notification** the MageNativeWooCommerce Mobile App sends the user a notification message regarding any new offer or any other app-related messages without the user actually opening the app. The notification is pushed to the mobile to draw the user's attention towards the latest happening in the app, even when the screen of the tab or mobile is locked, and the app that is pushing the notification is closed.
- Social Login: A single sign-on technology is used that allows users to authenticate themselves on MageNative App by connecting through a social media such as Facebook and Google. Thus, offering an option to register, log in with their regular social login ID and password rather than going through the regular process of registration for using the App.
- **Native Payment Gateway:** Will provide the NATIVE PAYMENT GATEWAYS that will make the application run smoothly and even faster on the transactions performed by the users.
- Voice Search: You can search the product with your own voice.

#### Other Efficient Features are as follows:

- Support all the payment method available on the WooCommerce store.
- Homepage Promotional Banner
- Promotional Deals
- Product Social Sharing
- Google Maps
- Google Analytics

- Customize App Design
- Filters
- Sort

### 2. Manage Banner

Admin can upload the promotional banner for the app home page. Admin can perform the following tasks:

- Add Banner Image
- Edit Banner Image
- Delete Banner Image

#### Add Banner:

- Go to the admin panel
- Open the Mobiconnect plugin
- Navigate to the homepage tab
- Click on "Add New" button located on the right side of Banners text.
