1. Overview

JD.com is China's largest online retailer company by revenue. JD Integration for Magento 2 is an amazing integration that helps online retailers of Magento 2 to gain an opportunity to create an online shop where the merchants can list their products to sell on JD.com. It synchronizes inventory, price, and other details between the Magento 2 store and JD.com.

Key Features

- **Bulk Product Upload:** This feature enables merchants to upload bulk products in one click by just selecting the products and upload at one go on JD.com.
- Multi-Account: You can manage multiple JD accounts and configure each of them individually.
- Auto Acknowledgement of Orders: Admin receives the notification as soon as the order is created on JD.com.
- **Profile Based Product Upload:** In order to upload products on JD.com, the admin can create the profile can after assigning the products to the profile easily upload on JD.com.
- **Category Mapping:** Many categories of your Magento 2 store can be mapped to a single category of JD.com as it follows many to one category mapping methodology.
- Auto synchronization: Auto synchronization of inventory, price, orders, and product critical data between the Magento 2 store and JD.com at a regular interval of time.
- **Product Data Validation:** The extension enables to validate the product information in accordance with JD standards and value.

2. Configuration

To Configure the extension,

- 1. Go to the Magento 2 Admin panel.
- 2. On the left navigation bar, click on **JD Magento 2 Integration**. A menu appears as shown below:

3. Click on **Configuration**.

The **Configuration page** appears as shown below:

Configuration			Q	10	
Scope: Default Config 👻 🕐					Save Config
CEDCOMMERCE	^	Jd Api Settings			\odot
		Jd Product Settings			\odot
		Jd Order Status			\odot
		Order Address			\odot
		Jd Global Settings			\odot
		Jd Inventory Rules			\odot
		Jd Cron Settings			\odot

 \odot

4. Click on **JD Api Settings**.

The section is expanded as:

			(
Enabled [global]	Yes	•	
Debug Log [global]	No	•	
	Enabled [global] Debug Log [global]	Enabled [global] Yes Debug Log [global] No	Enabled [global] Yes 🔹

- 5. Under **JD Api Settings** do the following steps:
 - In the **Enabled** box, select **Yes** to enable the configuration settings.
 - In the **Debug Log**, select Yes to create the logs.
- 6. Now click on JD Product Settings.

The section is expanded as:

Product Settings	
Jd Shipping Rates for Continental US [global]	
101	Shipping Rates for US Continent eg : 10
Jd Shipping Rates for Everywhere Else	
[Pioper]	Shipping Rates for Everywhere Else eg : 10

- 7. Under JD Product Settings, do the following steps:
 - In JD Shipping Rates for Continental US, enter the shipping rates of products for the US.
 - Under **JD Shipping Rates for Everywhere Else**, enter the shipping rates for products for other continents.
- 8. Now scroll down and click on ${\bf JD}~{\bf Order}~{\bf Status.}$

The section is expanded as:

Jd Order Status		\odot
Order Status [store view]	Please Select Order Status 🔻	
	Multiple order status can be separated by English comma, please use English comma to stitch English status to jos instead of numbers. 1) WAIT_SELLER_STOCK_OUT waiting to be shipped out 2) WAIT_GODDS_RECEIVE_CONFIRM waiting to confirm receipt 3) WAIT_SELLER_DELIVERY waiting for delivery (only applicable to overseas purchase merchants, meaning "waiting for domestic shipment" label orders, non-overseas purchase merchants need not use) 4) PAUSE Suspension (loc orders can be obtained through this status) 5) FINISHED_L completed 6) TRADE_CANCELED canceled 7) LOCKED is locked 8) POP_ORDER_PAUSE pop business suspension, such as 3c card / performance / gold can pass this status.	
Orders Fetch Start Date [global]		l.
Orders Fetch End Date	tan)	
	Default current date.	
Order Fetch For Out Of Stock Product	No	
	Order Create for out of stock products	
Create New Product (if Not Exist) on the time of	No	
[globa]	Create New Product if SKU not found in Magento Store on the time of Order Fetch	

- 9. Under JD Order Status, do the following steps:
 - In Order Status, select the status of the order from the dropdown menu.
 - In Orders Fetch Start Date, select the date from which you want to fetch the orders.
 - In Orders Fetch End Date, select the end date for the orders to be fetched.
 - In **Order Fetch for Out of Stock Product**, select **Yes** if you want to create an order for the products that are out of stock.
 - In Create New Product(if Not Exist) on the time of Order Creation, select Yes to create new products if it is not found in the Magento store.
- 10. Now click on Order Address.

The section is expanded as:

Region Id [global]		
	Region ld not Getting From jd Order data you need to fill region id for order importing in magento.	
Zip Code		
10	Zip Code not Getting From jd Order data you need to fill zip code for order importing in magento.	

- In **Region Id**, enter the region id for importing orders in Magento.
- In **Zip Code**, enter the code for order importing in Magento.
- 12. Scroll down and click on JD global settings.

The section is expanded as:

Jd Global Settings			\odot
Please set the global settings for Jd.com			
Jd Product Price [global]	Default Magento Price	•	
	Select to send a different product price to jd.com		
Jd Order Id Prefix [global]			
	Prefix for Jd Increment ID		

13. Under JD Global Settings, do the following steps:

- In JD Product Price you can increase or decrease the price accordingly to display, for this do the following steps:-
 - Increase by Fixed Price: If selected, then the Modify by Fix Price field appears.
 - Increase by Fixed Percentage: If selected, then the Modify by Percentage Price field appears.

Enter the numeric value to increase the price of the **JD**, product price by the entered value % of Magento 2 price.

For Example,

Magento 2 price + 5% of Magento 2 price. Magento 2 Price = 100 Select Increase By Fixed Percentage option Modify by Percentage Price = 5 100 + 5% of 100 = 100 + 5 = 105Thus, JD Product Price = 105

• Decrease by Fixed Price: If selected, then the Modify by Fix Price field appears.

 Decrease by Fixed Percentage: If selected, then the Modify by Percentage Price field appears.

Enter the numeric value to decrease the price of the **JD** product price by the entered value % of Magento 2 price.

For Example, Magento 2 price – 5% of Magento 2 price. Magento 2 Price = 100 Select **Decrease By Fixed Percentage** option **Modify by Fix Price** = 5 100 - 5% of 100 = 100 - 5 = 95Thus, JD Product Price = 95

- In **JD Order Id Prefix**, enter the unique id for JD orders.
- 14. Now click on the section JD Inventory Rules.
 - The section is expanded as:

Jd Inventory Rules		
Set Inventory on Basis of Threshold [global]	Enable	·
	Choose yes to send inventory on jd by condition	
Inventory Threshold Value		
	Set inventory quantity on which lesser and greater condition can control. (_Ple Enter Numeric Value)	ease
Send Inventory for Lesser Than Threshold Case [global]		
	Send Quantity to Jd for those products, whose inventory is LESSER than the intershold. (_Please Enter Numeric Value)	ventory
Send Inventory for Greater Than Threshold Case [global]		
	Send Quantity to Jd for those products, whose inventory is GREATER than or E the inventory threshold. (_Please Enter Numeric Value)	QUAL to

- 15. Under JD Inventory Rules, do the following steps:
 - In the **Set Inventory on Basis of Threshold** list, select the **Enable** option if required to set the inventory based on the threshold.
 - In the **Inventory Threshold Value** box, enter the required value.
 - In the Send Inventory for Lesser Than Threshold Case box, enter the required value.
 - In the Send Inventory for Greater Than Threshold Case box, enter the required value.
- 16. Scroll down and click on **JD Cron Settings.** The section is expanded as:

Jd Cron Settings

- 17. Under JD Cron Settings, do the following steps:
 - In the JD Order Cron list, select the Enable option to enable the fetch order cron.

- In the JD Price Cron list, select the Enable option to enable the price sync cron.
- In the JD Inventory Cron list, select the Enable option to enable the inventory sync cron.
- 18. Click the **Save Config** button to save the entered values and information.
 - The configuration will be saved
