1. Overview

Wish is a mobile and web E-Commerce platform that was founded in the year 2011. Headquartered in San Francisco, USA, it operates worldwide with a major presence in the regions of North America, Europe, Brazil, and China. It is the sixth largest e-commerce company in the world and allows sellers to sell on Wish in some simple steps

Launched much after them, Wish.com has been a competitor for formidable marketplaces such as Walmart and Amazon. Wish currently has thousands of active merchants who have been selling products to millions of users globally.

Wish Prestashop Integration is a fabulous API integration that helps the Prestashop store owners to synchronize inventory, price, and other product details for the product creation and its management between the Prestashop store and the Wish marketplace.

The Wish Prestashop Integration extension integrates the synchronized product listing between Prestashop and Wish. Once the seller has installed the extension, it becomes easy to create the Wish Categories and map the dependent attributes on the Prestashop store.

This ahead of the curve extension empowers the sellers to configure the desired product category into Prestashop for automatic submission of the selected product to the same Category on Wish.

The Key Features are as follows:

Profile based product upload: Admin can create a profile, map the Wish category and attributes to the Prestashop category and attributes, and then after assigning the products to the profile can easily upload products to Wish.com.

Attribute Mapping: Maps suitable existing attribute with Wish attribute , so a seller need not to populate those fields.

Bulk Upload System: The merchant has the flexibility to upload as many number of products on Wish.com using bulk product upload feature, as wanted.

Synchronized Inventory: Auto synchronization of the inventory at regular intervals and the listing of the products along with all the details is established between Prestashop and Wish.com.

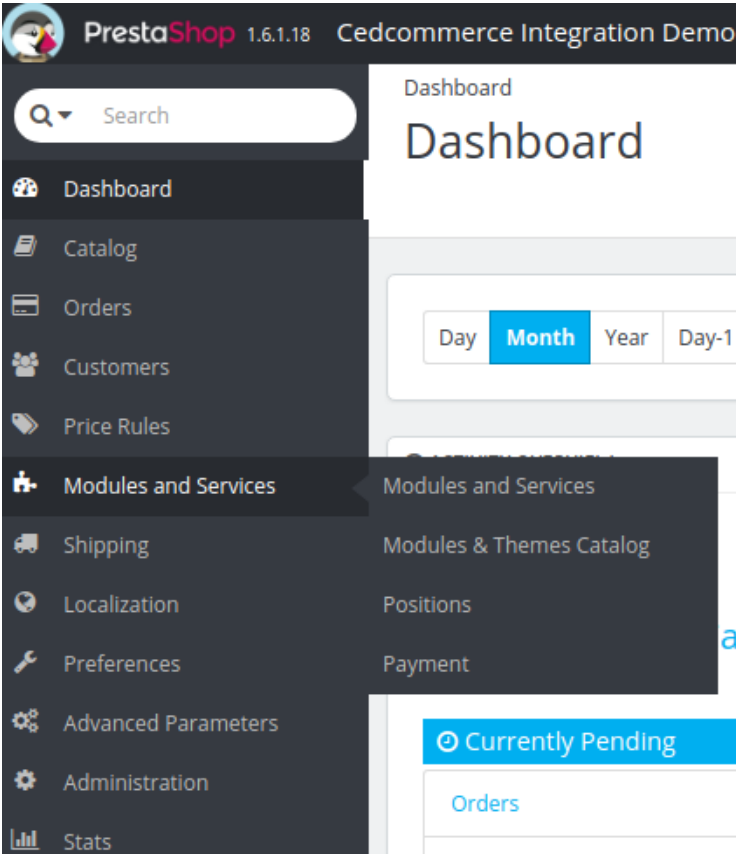

Enable and Disable Products: Merchants can close and reopen the products on Wish.com using Enable and Disable feature.

Simple and Configurable Product Upload: Admin can upload the Simple and Configurable type of Prestashop products on the Wish website.

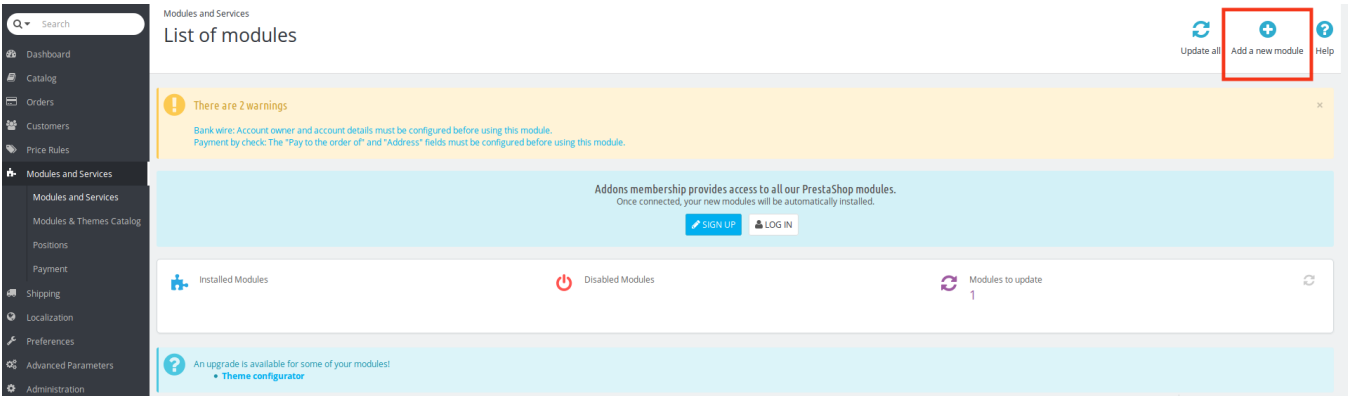

2. Wish Prestashop Integration Extension Installation

To install the extension:

- Go to the **Prestashop Admin panel**.
- On the left navigation bar, point cursor to the **Modules and Services**.
The menu appears as shown in the following figure:

- Now click the **Modules and Services** menu, and you will come across a page like shown below.

- Now you need to click on **Add a New Module** on the top right corner of the page.
- On doing so, the page opens a section like shown in the image below:

- Now in the Module File tab, choose the package file of Wish marketplace from your system.

- Once selected, click on the **Upload this module button**.
- On the same page, scroll down and in the Modules list, search for Wish and it will be listed in the right side like shown in the image below. You have to click on the **Install** button shown in the image.

- Once you click on **Install** button, you can see a message like shown below, on the same page, asking you if you wish to proceed with the installation. You may click on **Proceed with the installation**.

Important Notice

Do you want to install this module that could not be verified by PrestaShop?

This generally happens when the module isn't distributed through our official marketplace, PrestaShop Addons - or when your server failed to communicate with PrestaShop Addons.

Module	Wish Integration

5. You can also Create New Batch by click on '**Create New Batch**' button on the top.
The tab appears as shown in figure:

6. In the **Batches**, do the following steps:

- a. In **Since, Optional**: The download will include Products last updated after this date. Accepted formats: YYYY-MM-DD, YYYY-MM-DDTHH:MM:SS To download all of your Products, do not provide the `since` parameter.
- b. In **Sort**, choose Asc or Desc to sort the products.
- c. In **limit**, A limit on the number of Products that can be returned.
- d. In **Show Rejected**, If specified to `true`, this API will return all products including those inappropriate products that were rejected during review.
- e. In **Warehouse Name**, the product information will be for this warehouse. If not specified, the default warehouse product information is returned
