## 1. Overview

CedCommerce's Admin Cli (Command line interface) Command Executor extension directly runs Cli commands from the Magento 2 admin panel. The extension is helpful for those who don't have SSH access to your server or are not interested in using it. User verification is done with the help of a password field for security.

The command list of the Admin Cli Command Executor includes the following:

1. *Setup-Upgrade*
2. *Setup-di-Compile*
3. *Setup- Static-Content:Deploy- f*
4. *Indexer-Reindex*
5. *Cache-Flush*
6. *Cache Clean*

### Key Features of Admin Cli Command line interface:

1. **User-Friendly Cli interface:** You can easily execute the CLI commands without the need for typing commands.
2. **Easily Cleans Cache:** The clean cache command of the extension helps in quickly cleaning data without any kind of annoyance.
3. **Indexer-Reindex:** When a change is made in the admin, the indexed data is updated instantly with the help of the Cli extension.
4. **Cache Flush:** This command of the extension helps in clearing the DNS cache, protects your privacy, prevents malicious spoofing, and helps in resolving HTTP errors.

## 2. Installation of Admin Cli Command Executor

### For installation of extension:

- Log in the **ftp**, and then go to Magento 2 root folder (generally present under the *public\_html* folder).
- Create a new folder named *code* under the *app* folder; under *code* folder, create a folder named *Ced*.
  - a. Upload or Drag and Drop *app/code/Ced* directory.
  - b. After successfully uploading the directory, the extension will be installed/upgraded.
  - c. Now run the following upgrade command in *cmd*

```
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy -f
php bin/magento indexer:reindex
php bin/magento cache:flush
```

## 3. Configuration setting for Admin Cli Command Executor

After successfully installing the Admin Cli Command Executor extension on the Magento 2 store, the admin has to set up the configuration settings required to enable the extension's features.

**To configure the settings:**

1. Go to the **Admin** panel and select and select **Admin-Cli**.
2. After selecting Admin-Cli, then click on **Configuration**.

The screenshot displays the Magento 2 Admin Panel interface. On the left, a dark sidebar menu is open, showing the 'Admin-Cli' section expanded. A red box highlights the 'Configuration' option, with a red arrow pointing to it. The main content area shows the 'Admin Cli Executor Settings' page. The 'Enabled' dropdown menu is set to 'Yes'. Below the settings, there is a green information banner that reads: 'Need help with the settings? Please consult the [user guide](#) to configure the extension properly.' A 'Save Config' button is visible in the top right corner of the settings area.

3. In the **Admin Cli Executor Settings**, select **YES** from the drop box and then click **Save Config** (Configuration) option.

Task "Rule processing: 2": 1 Item(s) have been scheduled for update. [View Details](#) System Messages: 3

### Configuration

Scope: Default Config [?](#) [Save Config](#)

**CEDCOMMERCE**

- Delete Order Configuration
- G Translate Configuration
- Admin Cli Executor**
- Whatsapp Order Notification

**Admin Cli Executor Settings**

Enabled [store view] Yes

**User Guide By Cedcommerce**

Need help with the settings? Please consult the [user guide](#) to configure the extension properly.

4. A new page opens up, in the following page under **Admin Cli Executor** enter **admin password** for user.

### Admin Cli Executor

User Verification

Password \* Enter admin user password

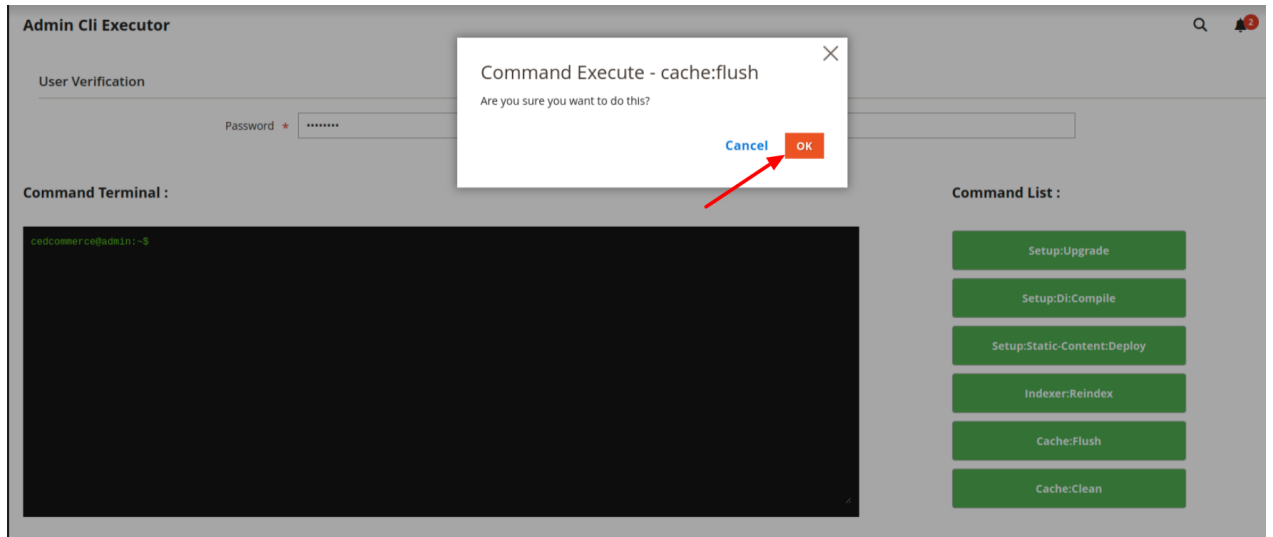

**Command Terminal :**

```
cedcommerce@admin:~$
```

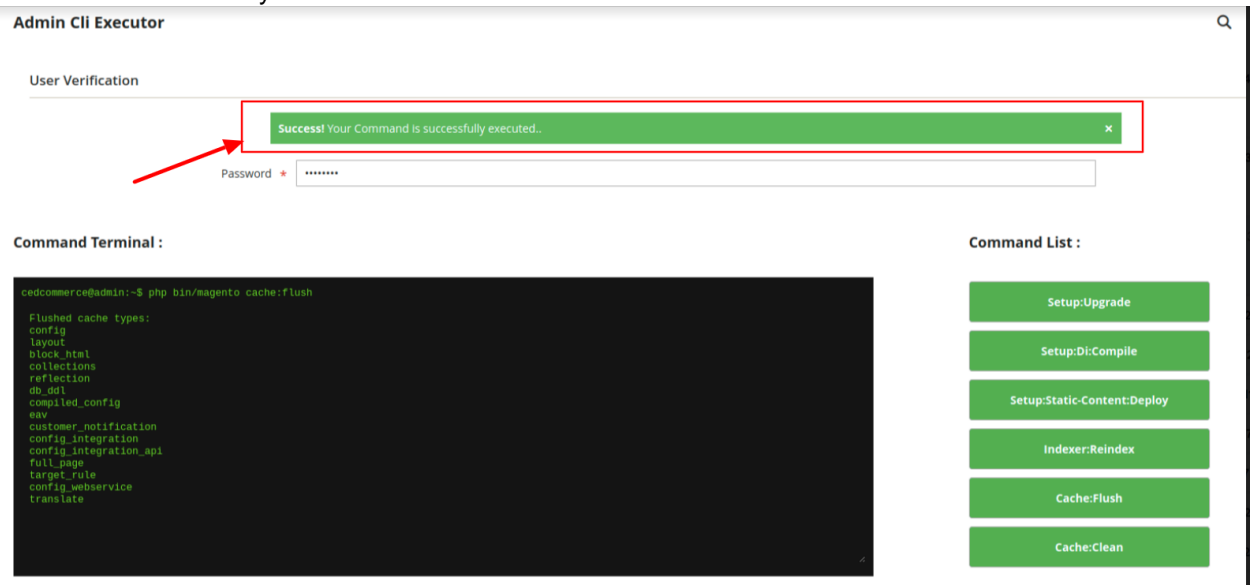

**Command List :**
