1. Overview of the Application

Amazon(<https://www.amazon.in/>)

, one of the world's largest eCommerce platforms, enables the third party sellers to display and sell their products alongside Amazon's standard listings. With 310 million active users across 58 countries, this eCommerce titan relies on third-party sellers to diversify its product inventory. Additionally, provides consumers with a large inventory of goods to search through.

With the BigCommerce Amazon Connector app by **CedCommerce**(<https://cedcommerce.com/>)

you can automate the selling process by eliminating the need for manual inventory updates. The application provides powerful tools and automation to simplify listing, create templates, prevent overselling and optimize fulfillment.

Key Features of the Application

- **Bulk Product Upload:** Optimize the process of uploading a large number of products to Amazon through the bulk product upload feature.
- **Inventory Price Sync:** Ensure your BigCommerce store and connected seller panels on Amazon maintain synchronization in both inventory and pricing.
- **Product Linking:** Allows you to effortlessly manage linked and unlinked products, offering manual linking options via Close Match and Linking Required.
- **Order and Shipment Sync:** Keep orders and shipments in sync between your BigCommerce store and Amazon using the order and shipment sync feature.
- **Product Listing:** Simplify the management of products imported from BigCommerce to the app with this helpful feature.

2. How this Guide will help you

The BigCommerce Amazon Connector User Guide is an all-inclusive guide crafted for Amazon sellers. This guide is designed to simplify different facets of selling and provides an in-depth understanding of the functionalities of the app while efficiently managing the selling process on marketplaces.

Let's Get Started.

This guide will provide you with complete guidance on the following:

- **Dashboard**

The Dashboard section is meant to provide real-time insights on products, orders, and more. Also keeps you updated with all the recent activities performed on the app. Additionally, you can also view all the activities performed on the app in the Activities section.

- **Category Template**

The Category Template section on the app allows you to view the key details of your Category Template. When listed on Amazon, these products are assigned to specific categories. These templates help streamline your product listings, and provide a seamless shopping experience for your customers.

- **Manage Products (Product Listing)**

The Manage Products (Product Listing) segment on the app allows you to view and manage all products imported from the app.

- **Product Linking**

The Product Linking section of the app helps you in linking all the products from Amazon products with their corresponding BigCommerce counterparts.

- **Orders**

The Order segment on the app assists you in importing orders from Amazon to the app. Also you can view all order details fetched from Amazon to your BigCommerce store.

- **Settings**

The purpose of the Settings section on the app is to streamline your selling process. It allows you to view the details of the connected account, delete the details of the connected account and allows you to add a new account. Also the section enables you to manage marketplace settings, inventory rules, and order management.

- **Feeds**

The Feeds section of the BigCommerce app allows you to view the data that is sent to Amazon in the form of different feeds.

3. Dashboard of Connector

3.1. Dashboard

The dashboard section provides real-time insights about products, orders and more and also keeps track of all the recent activities carried out on the app.

The dashboard features a top navigation bar with the BigCommerce logo and menu items: Dashboard, Category Template, Manage Products, Product Linking, Orders, Settings, and Feeds. The main content area is divided into three sections:

- Product Status:** Contains four cards: Active (0), Inactive (1), Not Listed (67), and Error(s) (0). Each card includes a status icon and a 'View Products' link. A 'View All' link is located in the top right corner of this section.
- Order Status:** Contains four cards: Shipped (0), Fulfilled (0), Created (0), and Failed (0). Each card includes a status icon and a 'View Orders' link. A 'View All' link is located in the top right corner of this section.
- Product Linking:** Contains three cards: Unlinked (34), Linked (1), and Close Match (0). Each card includes a status icon and a 'View Products' link. A 'Manage Linking' link is located in the top right corner of this section.

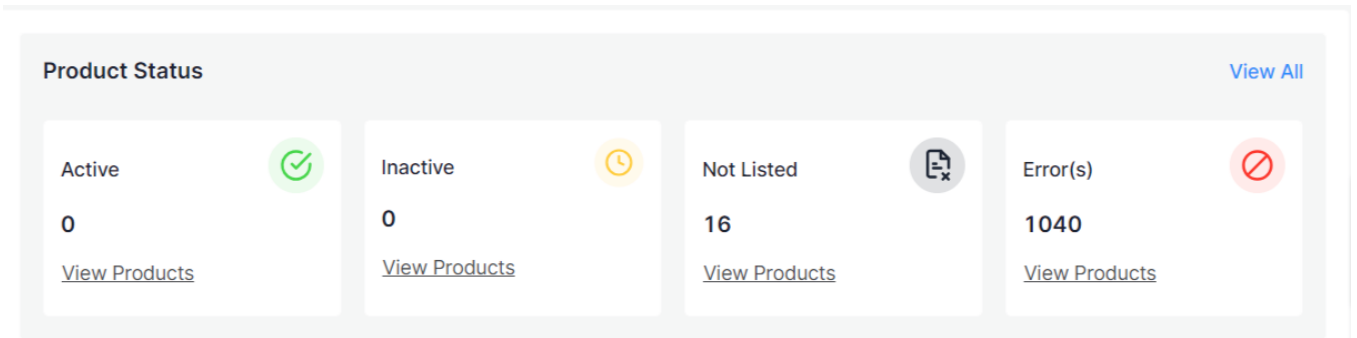

Actions you can perform in the Dashboard:

- View the Product Status
- View the Order Status
- View Product Linking
- View Connected Accounts
- View Activities

3.1. View the Product Status

Step 1: Go to the Dashboard

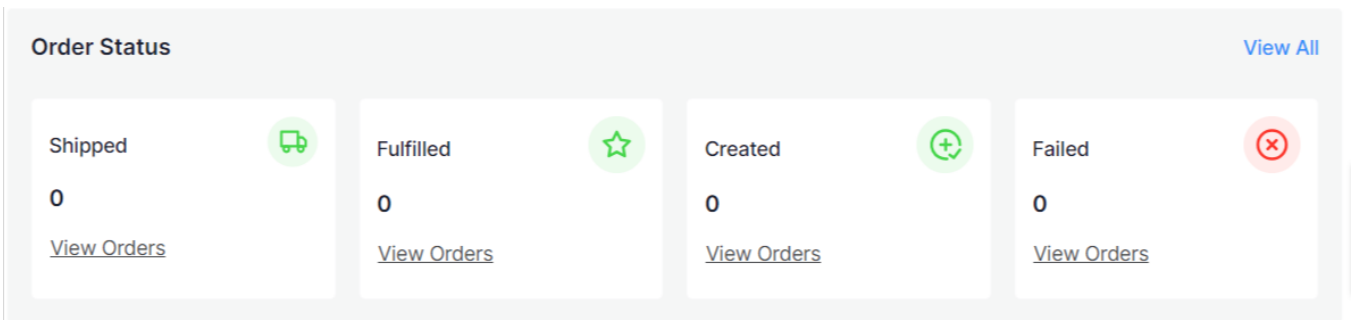

Step 2: Click on the Product Status to get a clear insight on whether your product is active, inactive, not listed and error.

3.2. View the Order Status

Step 1: Go to the Dashboard.

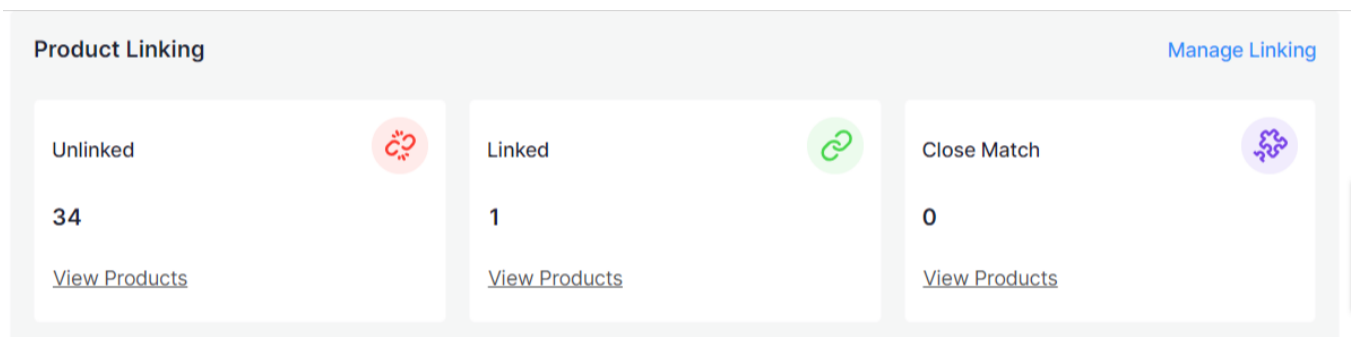

Step 2: Click on the Order Status to view the status of your product, whether it is shipped, fulfilled, created and failed.

3.3. View Product Linking

Step 1: Go to the Dashboard.

Step 2: Click on the Product Linking to view all the links of all your Amazon products with their BigCommerce equivalent.

3.4. View Connected Marketplace Account

Step 1: Go to the Dashboard.

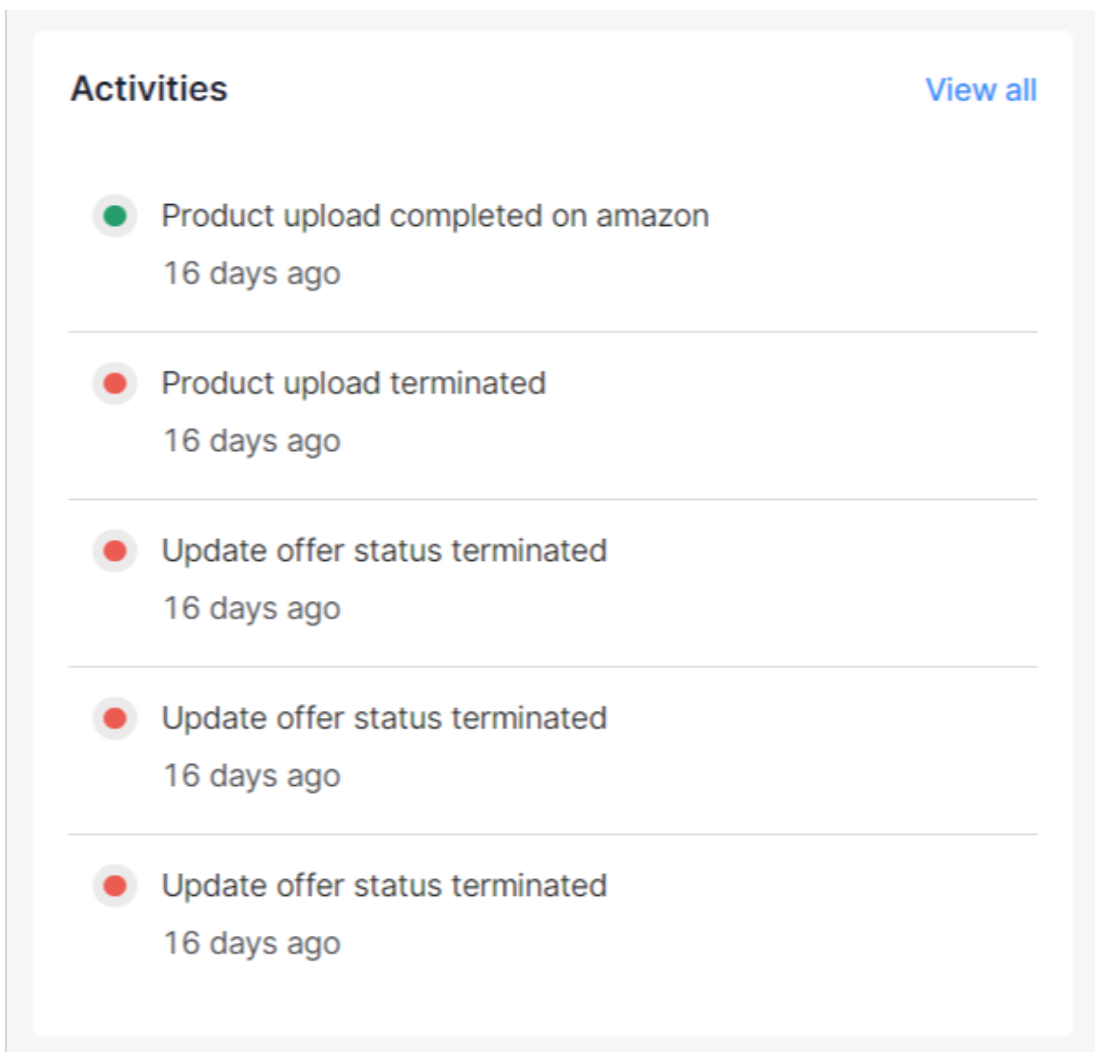

Step 2: Move to the top right corner under the section of Connected Marketplaces Accounts you can view the Amazon account connected to the app.

3.5. View the Activities

Step 1: Go to the Dashboard.

Step 2: Next go to the right corner under the Activities section you can view the records of all the recent activities performed on the app.

4. Category Template

Under the Category Template section, you can categorize products with similar characteristics based on a query. When these products are listed on Amazon, they are associated with specific categories and attributes, providing clear and accurate details in the listings. However, it is a prerequisite for users to begin by establishing a default template and subsequently create templates for other categories.

4.1. Actions you can perform on the Category Template of Amazon:

- Create Category Template/ Create Category Default Template
- Edit Default/Edit Default Template
- Create Template

4.1.1. Create CategoryTemplate/ Create Default Category Template

The Create Category Template section helps you to create templates for categorizing your products effectively. Default Category Template helps you in case when you have not specified a category for the product , it will automatically fall under the default category. **Before creating a category template it is a mandatory requirement for you to have a default template. However, if you have not created a default template then the create template option will remain disabled.** The process of creating category template and default category template is the same.

Create Template

Let's begin creating a new Category Template. Save

Enter a unique name for the product template you wish to create. Template name must be unique and should not exceed 80 characters.

Select Listing Category *
Select a Listing Category for this template, and further map Amazon attributes with BigCommerce attributes or set a custom value.

Barcode/GTIN Exemption
Enable this option if you have a GTIN Exemption for your products.
If products that you want to upload to Amazon, don't have valid barcodes/ GTIN, kindly apply for the GTIN exemption [here](#)

Q Search Category

Browse and Select Category

- Default
- Beauty >
- Apps for Android >
- Baby >
- Bags, Wallets and Luggage >

Assign Rule to the Template *
You can create a Rule Group or query for your products by allowing specific filter options that can be applied to the template. These Rules help to apply settings on specific products.

- Select **Any Condition** to fetch the products fulfilling any of the conditions created.
- Select **All Condition** to fetch the products fulfilling all the conditions created.
- Click on **Add More** to add multiple conditions in the Rule Group.
- Click on **Run Query** to fetch the number of the products on the basis of the Rule Groups created.

Rule Group

Override Listings
Select this option if you wish to override listings with templates already assigned.

Product Must Match Any Condition All Conditions

Title Contains Enter the value

Add More Run Query

Step 1: Navigate to the Category template and click on it. This action will lead you to a new page where you can create a template. Also you are requested to create a default template.

Step 2: Go to the top right corner of the page and click on the Create Template button.

Step 3: Enter a unique name (not exceeding 80 characters) for the product template that you wish to create.

Step 4: Browse and Select listing category for the product template and further map Amazon attributes with BigCommerce attributes or set a custom value.

Step 5: Assign rule to the template by creating a Rule Group or query for your products by allowing specific filter options that can be applied to the template. These rules help to apply settings on specific products.

- Select any Condition to fetch the products fulfilling any of the conditions created.
- Select All Conditions to fetch the products fulfilling all the conditions created.
- Click on Add More to add multiple conditions in the Rule Group.
- Click on Run Query to fetch the number of the products on the basis of the Rule Groups created.

Step 6: In Assign Rule to the template section there is option of OverRide Listings. You can select this option if you wish to override listings with templates already assigned.

Step 7: Save the changes in the product template by clicking on the Save option at the top right corner of the page.

Category Template Edit Default Template Create Template

Category templates are meant to group similar products based upon a query. These products are then assigned to specific categories and attributes when listed on Amazon.

Click on **Edit Default Template** to modify the default template. ×

Enter Template Name

Name	Category	Rules	Total Products	Actions
Default	Default	-	0	⋮
test	Default	View Rules	829	⋮

< 1 of 1 >

4.1.2. Edit Template/ Edit Default Template

Under this section you can edit template/default template that you have created. You can edit the fields such as Template Name, Category, Rules, Total products and Action option.

Step 1: Go to the Category template and click on it. This action will lead you to a new page where you can create a template.

Step 2: Take your cursor to the top right corner of the page and then click on the Edit Template/Edit Default Template.

Step 3: Search and select a Listing category for your template.

Step 4: After selecting a listing category map Amazon Category attributes to your BigCommerce Product attributes or Set a Custom value based on the Amazon Product category selected. The attributes are of two types which are mentioned below:

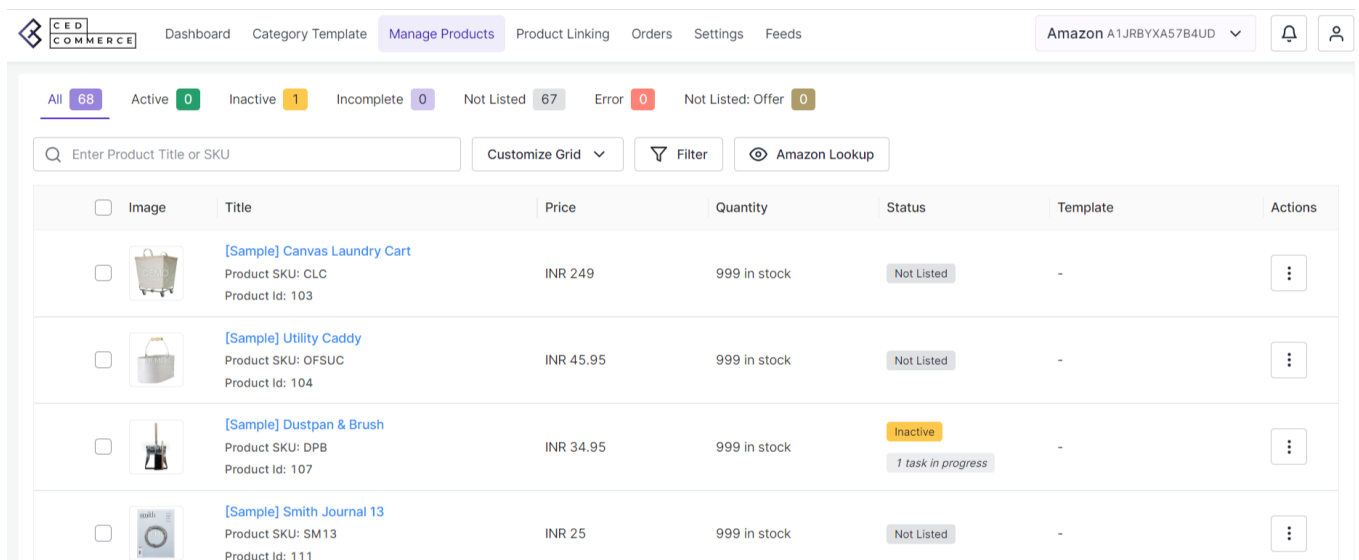

- **Required (Must Fill)** : These are a set of Amazon attributes mandatory to be mapped with BigCommerce store product attributes. You can also set a Custom Valid value for the same as per your requirement.
- **Optional**: This is an optional set of attributes you may or may not map per your requirements. Optional attributes can be added by clicking on the Add More button.

Step 5: Archive the changes by clicking on the Save button on the top right corner of the page.

5. Manage Products (Product Listings)

The intent of the Manage products or Product listing section is to smoothly manage all products imported from the BigCommerce application and sync product status from Amazon.

Step 1: Select the Manage products. A new page will open up where you can view the status of your product.

The screenshot shows the BigCommerce 'Manage Products' page. At the top, there's a navigation bar with 'Dashboard', 'Category Template', 'Manage Products' (active), 'Product Linking', 'Orders', 'Settings', and 'Feeds'. On the right, there's a user profile dropdown for 'Amazon A1JRBXYA57B4UD'. Below the navigation, there are filters for product status: All (68), Active (0), Inactive (1), Incomplete (0), Not Listed (67), Error (0), and Not Listed: Offer (0). A search bar is present with the text 'Enter Product Title or SKU'. There are also buttons for 'Customize Grid', 'Filter', and 'Amazon Lookup'. The main content is a table with the following columns: Image, Title, Price, Quantity, Status, Template, and Actions. The table contains four rows of product listings:

Image	Title	Price	Quantity	Status	Template	Actions
	[Sample] Canvas Laundry Cart Product SKU: CLC Product Id: 103	INR 249	999 in stock	Not Listed	-	
	[Sample] Utility Caddy Product SKU: OFSUC Product Id: 104	INR 45.95	999 in stock	Not Listed	-	
	[Sample] Dustpan & Brush Product SKU: DPB Product Id: 107	INR 34.95	999 in stock	Inactive 1 task in progress	-	
	[Sample] Smith Journal 13 Product SKU: SM13 Product Id: 111	INR 25	999 in stock	Not Listed	-	

Description of the fields in Product Listing:

- **Active:** The active product status highlights the number of active products on Amazon that are available for sale from those assigned products that are listed.
- **Inactive:** The inactive status of products unveils the details about the number of inactive products that are not available for selling among those which are listed.
- **Incomplete:** Incomplete product status indicates that the product information (image, title, price or quality) is not filled properly.
- **Not Listed:** The not listed product status indicates that the product listing is not showing.
- **Error:** The error status provides insight into why products cannot be successfully uploaded to the marketplace, and this can be linked to any factor responsible for the improper product upload.
- **Not Listed: Offer:** This field of the product listing that the product can be listed as offers

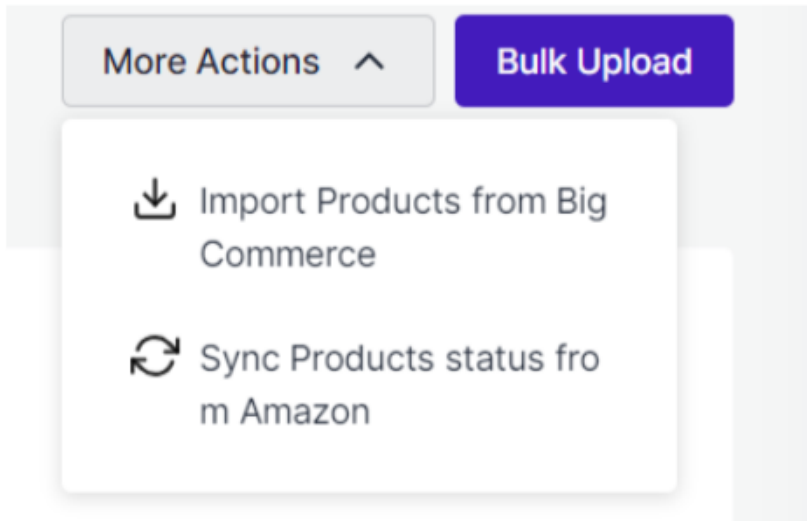

Actions you can perform on Product Listings:

-

Bulk Upload

5.1. Bulk Upload

The Bulk upload feature helps sellers effortlessly upload their products in bulk on the Amazon marketplace from the BigCommerce store.

Step 1: Go to the Manage Product (Product Listing) section and click on it. This action leads you to the Product Listing page.

Step 2: Select the Bulk Upload option present on the top right corner of the page.

Step 3: A pop up will appear for selecting the bulk upload on Amazon by the desired template from the drop down menu. Select the products from the drop down menu for uploading the bulk product.

6. Product Linking

The Product Linking section enables you to view linked products, those products which require linking or unlinking. Also can manually link all products through Close Match and Linking Required.

Step 1: Select the product linking section and click on it. This action will take you to a new page where you can easily manage linking and unlinking of the product.

Actions you can perform on Product Linking:

-

Link Catalog

The link catalog feature of the BigCommerce app initiates linking of the Amazon products and BigCommerce products.

Product Linking [Link Catalog](#)

Link all your Amazon products with their corresponding BigCommerce counterparts in just a few clicks. Easily manage linked products, those required linking or unlinking. You can manually link all products under Close Match and Linking Required.

Linking Required **34** Linked **1** Close Match **0**

Search by Amazon Title or SKU Sort by ▾

Image	Product Title	SKU	Barcode	Amazon Inventory	Amazon Status	Action
	Piko Fashions Beautiful Tank T... View on Amazon	29504	B01BZZ4T28	5	Inactive	Link
	Ruggers by Unlimited Men's sli... View on Amazon	ds	B073PX79DN	300	Inactive	Link

Step 1: Go to the product linking segment and select, the product listing page opens.

Step 2: Take your cursor to the top right corner of the page and click on the Link Catalog option.

Step 3: A popup message will appear, confirm that you want to initiate linking and the catalog link will start.

6.2. Descriptions of the fields in Product Linking

- **Linking Required:** The conditions for linking products with BigCommerce for Amazon marketplace. Furthermore, the criterion for linking the Amazon products with the corresponding BigCommerce counterpart involves the matching of Product Titles, SKU and Barcode.
- **Linked:** The products link your Amazon listed products with their corresponding BigCommerce equivalent.
- **Close Match:** The Close match criterion generally indicates an error where only product titles of Amazon match with BigCommerce products.

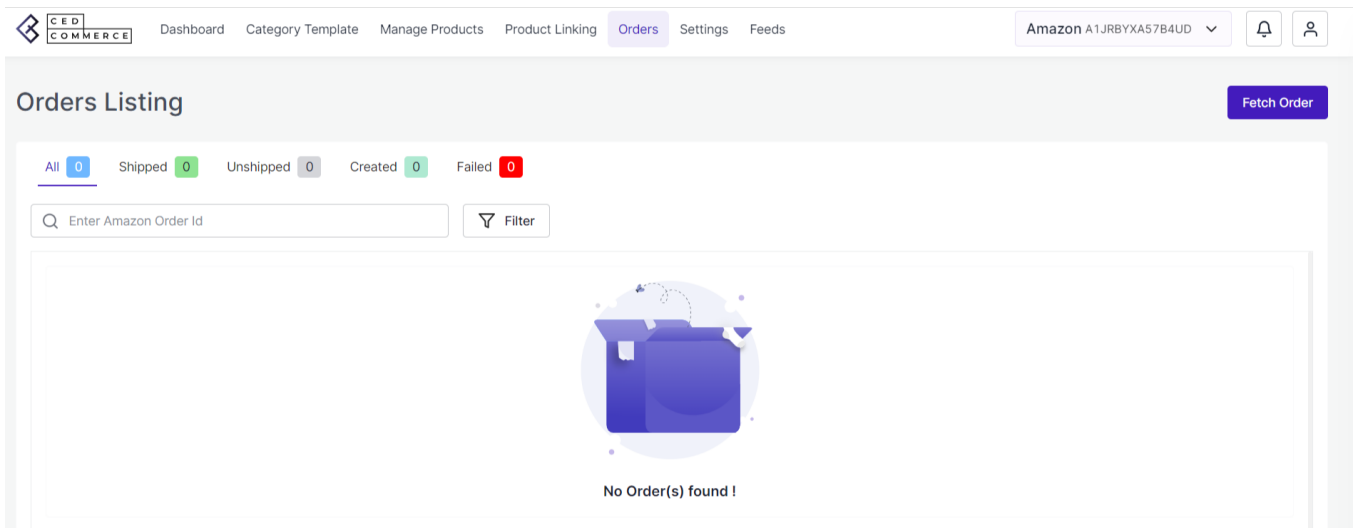

7. Orders

The Orders segment of BigCommerce showcases the status of your orders from Amazon or eBay to the BigCommerce app.

Actions you can perform on Order Listing:

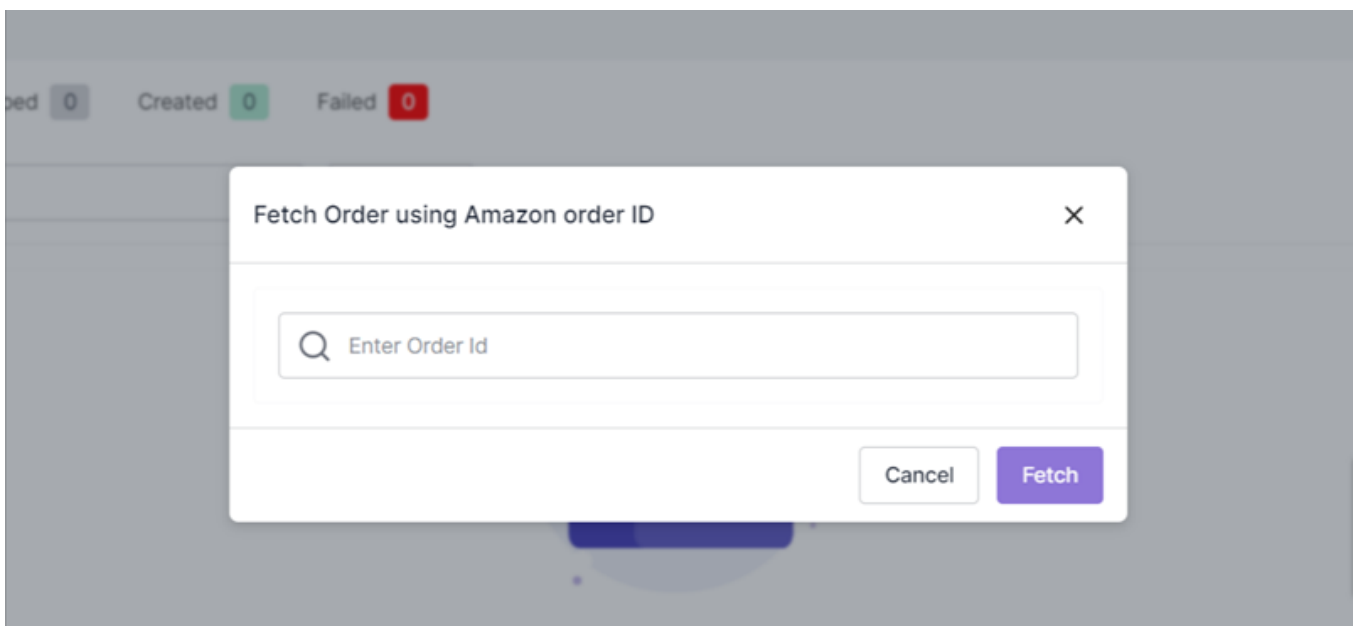

7.1. Fetch Orders

The Fetch Order features of the BigCommerce app fetches orders from Amazon to the BigCommerce app.

Step 1: Take your cursor to the Orders, leading you to the orders page. Select the Fetch orders present at the top right corner of the page.

Step 2: A pop appears with a message to enter the order ID of Amazon and click on the Fetch option.

7.2. Descriptions of the fields of Order Listing

- **Shipped:** The shipped status of the order listing specifies that the product is successfully shipped to the designated location.
- **Unshipped:** Unshipped status indicates that the product is in the process of being shipped.
- **Created:** The section enables you to view all the orders created on Amazon.
- **Failed:** If an order can not be fetched from Amazon to the BigCommerce application, then failed order status appears.

8. Settings

The Setting section allows you to view the details of the connected account and also enables you to manage the settings by adjusting the marketplace settings, inventory rules and order management for a smoother selling experience.

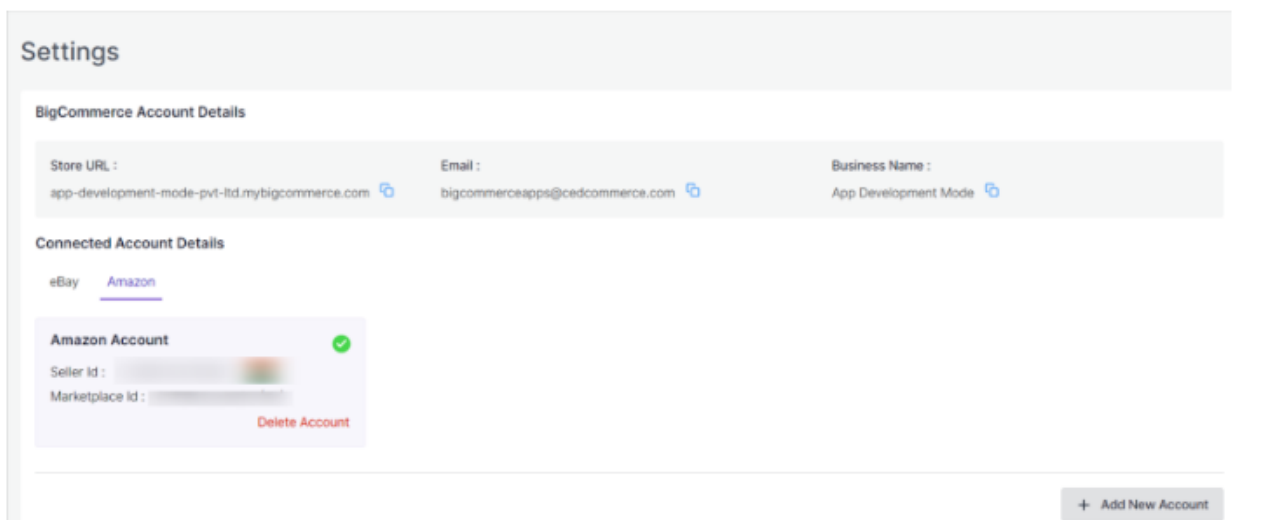

Actions you can perform on Settings:

- Add New Account
- Connected Account Details
- Delete Connected Account
- Marketplace settings
- Inventory rules
- Order Management
- Currency Setting

8.1. Add New Account

Step 1: Go to the Setting and click on it.

Step 2: After clicking a new page opens where you can see all the accounts connected to the app.

Step 3: Click on the Add Account button, enabling you to connect your Amazon account to the app.

Step 4: Fill in all the details, click on the Save button. This action will create a new Account in the module.

8.3. Connected Account Details

Step 1: Go to the Setting and click on it.

Step 2: A new page opens where you can view the details of the account connected to the app.

8.4. Delete Connected Account

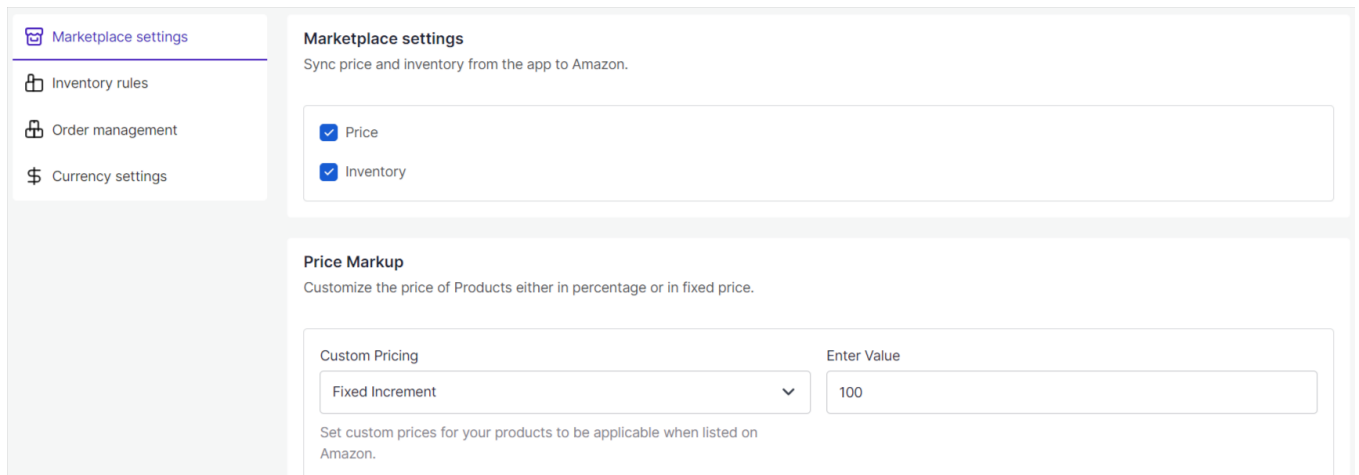

Step 1: Navigate to the Settings and click on it.

Step 2: You will be taken to the Settings page where you can go to the Connected Accounts and click on the Delete tab. This action will delete the account connected to the app.

8.5. Marketplace Settings

Step 1: Click on the Settings and you will be directed to the settings page.

Step 2: In the left grid, go to the Marketplace Settings tab. Using it you can sync price and inventory from the app to Amazon.

Marketplace settings
Sync price and inventory from the app to Amazon.

Price
 Inventory

Price Markup
Customize the price of Products either in percentage or in fixed price.

Custom Pricing: Fixed Increment (dropdown) | Enter Value: 100

Set custom prices for your products to be applicable when listed on Amazon.

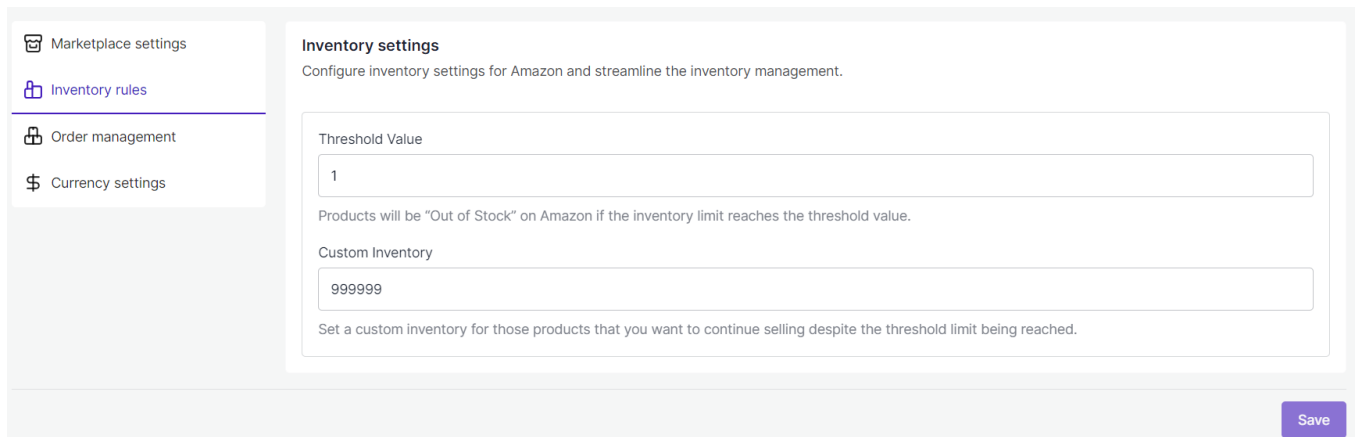

Step 3: The Price Markup option enables you to customize the price of products either in percentage or in fixed price. Under the Price Markup, go to Custom Pricing and from the drop down box select the custom price of your products to be applicable to be listed either on Amazon.

Step 4: Click on the Save button to save the changes.

8.6. Inventory Rules

Step 1: Select the Setting option, leading you to the settings page.

Step 2: Move to the left grid and select the option of Inventory rules. This action will help you in configuring inventory settings for Amazon and streamline the inventory management.

Inventory settings
Configure inventory settings for Amazon and streamline the inventory management.

Threshold Value: 1

Products will be "Out of Stock" on Amazon if the inventory limit reaches the threshold value.

Custom Inventory: 999999

Set a custom inventory for those products that you want to continue selling despite the threshold limit being reached.

Save

Step 3: Under the Inventory rules, you have to enter a Threshold value for your products. If the inventory limit reaches the threshold value then products will be “Out of Stock” on Amazon.

Step 4: The second step under Inventory Rules in Custom Inventory. Enter a value in the box provided for Custom Inventory. This action will help set a custom inventory for those products that you want to continue selling despite the threshold limit being reached.
